	Account Profile - Details	Dashboard Tab - Account Territory Fields section - Click/tap Next Visit Date (The link and date are stored in Provider Account Territory Information entity)	Visit Record Page	The user is navigated to the next scheduled visit for the account
		Click/tap Last Visit Date (The link and date are stored in Provider Account Territory Info entity)	Visit Record Page	The user is navigated to the last submitted visit for the account
		Click/tap Activity Timeline - "View Visit" link (or configured custom label in Admin Console > Activity Timeline > Activity Timeline Display Text Settings) for a planned or submitted visit	Visit Record Page	- The user is navigated to the visit record page - If the user taps on a group visit where the account is added as an attendee, the parent visit opens
		Click/tap Activity Timeline - "Finish your visit" link for a planned visit	Visit SPA	- The user is navigated to the planned visit Visit SPA - If the user taps on a group visit where the account is added as an attendee, the parent visit opens
	Account Search	Click/tap Quick Action - New Visit	Visit SPA	- The user is navigated to the new Visit SPA - Account is auto-populated - Test the scenario where the account does not exist in the offline database: - The user can go Search Online from Account Search, search the account in the salesforce universe, add it to the territory. - The account is pushed to the offline database and user can create a new visit for this account
		Click/tap Quick Action - Last Visit	Visit Record Page	The user is navigated to the last submitted visit for the account

Persona	Entry Point	Entry Point - Action	Navigate to:	Acceptance Criteria
		(Mobile) Multi-select accounts -> Tap Add To... -> Visit (Web) Multi-select accounts -> Click New Visit	Visit SPA	- The user is navigated to the new Visit SPA 1st selected account as populated as the primary and the rest of the accounts are added as attendees
	Global Search - Recent	Click/tap Visit record link	Visit Record Page	The user is navigated to the visit record page of the previously opened visit, whether the user opened the Visit SPA or Visit record page previously
	Planner	Click/tap + Button	Visit SPA	The user is navigated to the new Visit SPA
		Click/tap Submitted Visit (by pass Visit Preview)	Visit Record Page	The user is navigated to the visit record page
		Click/tap Planned Visit (by pass Visit Preview)	Visit Record Page	The user is navigated to the visit record page
		Click/tap Visit Preview - View Visit (Out of 258 scope)	Visit Record Page	The user is navigated to the visit record page
		Click/tap Visit Preview - Edit Visit (Out of 258 scope)	Visit SPA	The user is navigated to the Visit SPA
	(Mobile) My Team	Click/tap a subordinate rep's visit	Visit Record Page	- The user is navigated to the Visit SPA - The user is able to see the visit information and additionally shared details (by default, only the visit information)
	Intelligent Content Player	Click/tap Visit button	Visit SPA	The user is navigated to the Visit SPA
	Remote Engagement Player (Ad-hoc Remote Call)	Click/tap Visit button	Visit SPA	The user is navigated to the Visit SPA
	Homepage - Visits to Submit	Click/tap New Visit (displayed only when there are no records displayed in the section)	Visit SPA	The user is navigated to the new Visit SPA
		Click/tap 3 dots -> View Edit	Visit Record Page	The user is navigated to the visit record page
		Click/tap 3 dots -> Edit Visit	Visit SPA	The user is navigated to the Visit SPA
		Click/tap 3 dots -> Submit Visit	Visit SPA	- If there is no validation error, the visit is submitted and the success toast is displayed - If there are one or more validation errors, the visit is not submitted and the user is navigated to the Visit SPA and the validation error messages are displayed
	(Mobile) Homepage - Up Next with Map	Click/tap New Visit (displayed only when there are no records displayed in the section)	Visit SPA	The user is navigated to the new Visit SPA
		Click/tap 3 dots -> View Edit	Visit Record Page	The user is navigated to the visit record page
		Click/tap 3 dots -> Edit Visit	Visit SPA	The user is navigated to the Visit SPA

Persona	Entry Point	Entry Point - Action	Navigate to:	Acceptance Criteria
	Homepage - Up Next without Map (Out of 258 Scope)	Click/tap a visit record	Visit SPA	● The user is navigated to the Visit SPA
	Homepage - NBC	Click/tap New Visit or Last Visit	Visit SPA	● The user is navigated to the new Visit SPA
	Homepage - Floating Action	Click/tap New Visit	Visit SPA	● The user is navigated to the new Visit SPA
Sales Rep	Homepage - Activity Plan	Click/tap a visit record in Activity Plan Details	Visit Record Page	● The user is navigated to the visit record page

Visit Engagement (Visit SPA)

Buttons

Figma: [Document ID](#) (Figma DI.1)

Product Spec: [Visit Information\(SPA\)](#)

Area	User Story	Acceptance Criteria
Visit SPA Buttons in 1:1 visit or the parent visit of a group visit	As a field sales rep or medical science liaison, I must be able Save, Delete, Capture a Signature/Document ID or Submit a visit, so that I can efficiently manage and complete my visit and ensure my data are accurate and up-to-date	• The following buttons are available in Visit SPA (Hard-coded) ◦ Cancel button is available at the top left of Visit SPA ◦ Get Signature, Save, Submit, Document ID, and Delete buttons are available at the top right of Visit SPA ◦ Get Signature, Save, and Submit buttons are available directly in the page. ◦ Document ID and Delete buttons are available from the down-arrow button. • Cancel ◦ Cancels out of the Visit SPA without saving the data and navigates back to the original page • Get Signature (Applicable to field sales rep only) ◦ Runs applicable validations and in case of no error, opens Signature page ■ Before opening the signature page, a message is displayed to inform the user that a user authentication is required to come back to the Visit page (See Figma SI.2) • Title: Just a heads-up... • Message: "Navigating from the next screen is limited. You'll need to authenticate to go back to the Visit screen." ■ After user clicks OK, Signature page opens ■ If the user clicks on "Do not show me this message again.", The selection is saved in the user's device and next time when the user clicks Get Signature page button from Visit, the message isn't displayed. ◦ The button is enabled when the user adds at least one product with Signature Requirement Level (LifeSciMarketableProduct.SignatureRequirementLevel) = Mandatory or Optional to the visit. Otherwise, it is disabled. ◦ The button is disabled if the signature or Document ID is already captured for the visit (ProviderVisit.PhysicalFormIdentifier != null or DigitalSignature record exists for the visit) ◦ The button is hidden when a channel mapped to Remote is selected • Save ◦ Runs applicable validations and in case of no error, saves the Visit SPA and navigates to the visit lightning record page • Submit ◦ Runs applicable validations and in case of no error, saves the Visit SPA and navigates to the visit lightning record page • Document ID (Applicable to field sales rep only) ◦ The button is available only when "Show Document ID" setting in Admin Console - Visit Administration - Visit Settings - Signature Settings is enabled ◦ The button is enabled when the user adds at least one product with Signature Requirement Level (LifeSciMarketableProduct.SignatureRequirementLevel) = Mandatory or Optional to the visit. Otherwise, it is disabled. ◦ The button is disabled if the signature or Document ID is already captured for the visit (ProviderVisit.PhysicalFormIdentifier != null or DigitalSignature record exists for the visit) ◦ Runs applicable validations and in case of no error, opens Document ID popup (Figma DI.2)

Area	User Story	Acceptance Criteria
		■ Header: Document ID ■ Body: Add the document ID for this visit.Placeholder text: Enter ID... ■ Buttons: Cancel / Save ○ The user can enter max 255 char texts in Document ID ○ When user clicks Save, the Document ID is saved in ProviderVisit.PhysicalFormIdentifier field and a success toast "Document ID was saved" is displayed ● Delete (removed from Visit Engagement) ○ The button is disabled in a new visit until the visit is saved ○ The button is disabled after a signature or Document ID is captured for the primary account or at least one of the attendees ○ When the user clicks the button, delete confirmation message is displayed: ■ Title: Delete visit? ■ Body: Do you want to delete this visit record? ■ Button: Cancel / Delete ○ If the user selects "Delete" button, the visit and all the related records entered in the visit are also deleted: ■ Visit ■ Provider Visit ■ Detailing products (ProviderVisitProductDetailing) ■ Product message (ProviderVisitDetailingProductMessage) ■ Product discussions (ProviderVisitProductDiscussion) ■ Samples (ProductDisbursement) ■ Direct to Practitioner (ProviderVisitRequestedSample) ■ Marketing Items (ProviderVisitMarketingItem) ■ Presentations and Click Stream Metrics (PresentationForums, PresentationClickStrmEntry) ■ Attendees - Visit and Provider Visit records with Visit.ParentVisitId = deleted VisitId ■ Visitor (Visitor.VisitId = deleted VisitId) ● (Mobile) Remote Engagement ○ The button is displayed in the header only when a channel mapped to Remote is selected ○ The button is hidden on the web ○ The button opens Remote Engagement player

Quick Actions

Figma: [Actions - Primary Account](#), [Actions - Attendees](#)
Product Spec: [Visit Information \(SPA\)](#)

Area	User Story	Acceptance Criteria
Quick Actions -	As a field sale rep or medical	● In Mobile, quick actions for the primary account are available as floating actions

Area	User Story	Acceptance Criteria
Primary Account	science liaison, I must have quick access to visit-related quick actions for the primary account, so that I can efficiently document and manage all relevant activities during or after a visit	• In Web, quick actions are available from "Actions" button on the right of Account name in Visit Information section • The following actions are available in the order defined by admin by default if configured: ◦ New Inquiry ◦ Survey ◦ Send Email ◦ Last Visit ◦ Next Best Customer ◦ Schedule Next Visit (only for mobile. For web, this action is displayed in the sidebar as it was in OCE) New Inquiry • The action opens a new inquiry page • Account field is copied from the Visit, and pre-populated • After an inquiry is created, user is navigated back to the Visit SPA • The created inquiry is linked to the visit record (Inquiry.ReferenceRecordId = primary account's Visit.Id) • One or more inquiries can be created and linked to the visit Schedule Next Visit • The action opens "Schedule Next Visit" popup opens: ◦ Header: Schedule Next Visit ◦ Subhead text: When and where do you want to schedule the next visit? ◦ Buttons: ■ Cancel - close the popup without saving a next visit ■ Save - save the next visit and display the success toast: "Next visit was scheduled" ◦ Fields: ■ Account - Inherited from the visit. Read-only ■ Place - Inherited from the visit. Editable ■ Planned Start Time - Current datetime ■ Planned End Time - Planned Start Time + default duration in Admin Console - Visit Administration _ Visit Settings ■ Channel - Inherited from the visit. Editable • After the next visit is scheduled, show a success toast: "Next Visit was scheduled" and "Next Scheduled Visit" section at the top of the Visit SPA ◦ Display Channel, Planned Start Time - Planned End Time and Place (Address) in the section ◦ Delete button is available to delete the scheduled visit ◦ "Next Scheduled Visit" section is displayed while the user is working on the page. When user opens the same visit again, the section is not displayed. Survey • The action opens the Surveys popup where the list of survey invitations shared with the primary account, territory or product are displayed. See Surveys section in Visit record page for details. • The title of the Surveys popup is "Surveys" • The user can select a survey, respond to questions and save/submit a survey (SurveySubject.SubjectId = primary account's Visit.Id) • The responded survey is linked to the primary account and the visit Email • The action opens the email popup and user can select an email template • If product restrictions are applied to the primary account or attendees, email templates linked to the restricted products are disabled

Area	User Story	Acceptance Criteria
		- If the user selects a disabled email template, an error toast is displayed: "These accounts aren't eligible for {Product Name}; {Account Name1}, {Account Name2}." - In the Recipient page of the email popup, the primary account and attendees of the visit are pre-selected and the user can add/remove recipients - After the email is sent, the success toast message is displayed and the user comes back to the Visit SPA. - The email sent is linked to the visit record (LifeScienceEmail.SourceReferenceRecord = Visit Id of the primary account or an attendee) Last Visit - The action opens the visit record page of the last submitted visit in a popup by the user for the primary account - The user can close the popup and comes back to the Visit SPA Next Best Customer - The action opens Next Best Customer stats popup for the primary account - The user can close the popup and comes back to the Visit SPA External Link - The action opens the default browser of the device and displays the page as specified by the administrator - The specified parameters by the administrator are passed to the web site
Quick Actions - Attendees	As a field sale rep or medical science liaison, I must have access to visit-related quick actions for attendees of a group visit, so that I can efficiently document and manage all relevant activities during or after a visit	- Actions for the attendees are available in Attendee section - The following actions are available in this order by default if configured: - Attendee Visit - New Inquiry - Survey - Send Email - Last Visit - Next Best Customer Attendee Visit - The action opens Attendee Visit (Child Visit) page - Other actions behave the same as the quick actions for the primary account and are linked to the attendee's visit Id - The completed survey is linked to the attendee's visit - The created inquiry is linked to the attendee's visit - The email sent is linked to the attendee's visit

Sidebar

- State/SDL/DEA License - [Business License](#)

Persona: Sales Representative, Medical Science Liaison (MSL), Key Account Manager (KAM)

Area	User Story	Acceptance Criteria
Visit Information	As a field sales rep, I must be able to capture the basic information of the visit, so that I can report to my company when and where I visited my accounts	Page Layout: - Visit Information section is displayed at the top of the Visit SPA (Create/Edit Visit page) - Visit Information section is expanded by default and is collapsible 4 fields from Visit entity (Account, Place, Planned Start Time, Planned End Time) are hard-coded and always displayed - Record Type, Channel and Status from Visit entity is displayed if added to the page layout (our master page layout should have Channel field by default) - The fields are displayed in 2-column layout except Text Area or Long Text Area field (even if the page layout is configured as a 1-column layout). A Text Area or Long Text Area field is displayed on its own separate row - After the Visit hard-coded fields, configured fields from Provider Visit Page Layout are displayed as per the Provider Visit Page Layout configuration, including Record Type, Status, and Confirmed - Required field are marked with an asterisk - The user can edit Visit Information section as per field sales rep's field access permission in planned/unsigned visit (i.e. signature nor Document ID is captured) - If one or more record types are configured for the user's profile, the default record type is set by default - If more than one record type is configured for the field sales rep's profile, field sales rep can change the record type - When a field sales rep selects a different record type, a warning message is displayed: - Title: <u>Update record type?</u> - Body: Updating the record type can remove fields and their values. - Buttons: Cancel, Update - If the field sales rep clicks "Update" button, the new page layout linked to the newly selected record type is displayed. The value of the fields removed as a effect of changing the record type - After a Signature or Document ID is captured for the visit, Account, Place, and Record Type fields are locked and no longer editable - When a Signature or Document ID is captured for the parent visit or one of the child visits in a group visit, Account, Place, and Record Type fields of the parent visit are locked and no longer editable Account: - Account field is pre-populated by default from the screen that the field sales rep is navigated from if the screen is in Account context, including: - Account Search - Account Profile - Homepage - Next Best Customer - The user can select any account that field sales rep has access to via their account territory alignment or account sharing - Account name is displayed as a link which opens Account Profile in a full-screen modal for mobile and in a separate browser tab for web - The user can close the Account Profile modal and come back to Visit SPA - Below the account name, Professional Title (HealthcareProvider.ProfessionalTitle) is displayed for the person accounts and Record Type name (Account__r.RecordType.Name) is displayed for business accounts - If Product Restrictions are set at the account level for the account, Product Restrictions link is displayed below the Account field. - If Product Restrictions are set at the account-level or account-territory level, Product Restrictions link is displayed below the Account field. If Product Restrictions are not set, no link is displayed - When the field sales rep clicks Product Restrictions link, Product Restrictions warning popover is displayed: - Title: Product Restrictions - Body: This account isn't eligible for these products: <Product Name> <Product Name> - If both account level product restrictions and account-territory level restrictions are set for the same product, account level restrictions are applied

Area	User Story	Acceptance Criteria
		Switch Account: - The user can change the account from Switch Account link in Account field - The link is available in saved/unsigned visit (i.s. Signature nor Document ID aren't captured) and disabled in a signed/submitted visit - The link is available only for the parent visit in case of a group visit - Switch Account link opens Account Search popup - The current primary account of the visit is hidden in Account Search - If Detailing Product, Samples, Direct to Practitioner Samples or Items are already added to the visit, accounts that have account level or account-territory level product restrictions (if both are configured, account level restrictions are applied) to these products are disabled in the Account Search - If field sales rep clicks the disabled account, the error message "This account isn't eligible for these products: {Product Name1}, {Product Name2}. products are not eligible for this account: {Product Name1}. {Product Name2} ..." is displayed. - If sample limits apply to Samples or Direct to Practitioner samples already added to the visit, accounts that aren't eligible to receive the samples and quantities entered are filtered out in the Account Search - If a targeted presentation is played, the user selects an account for which the presentation is not targeted, a warning/error message is displayed depending on the setting. See Targeted Presentations for details. - Message text: "The selected presentations are not targeted for the added account: {Account Name}" - Refer to Visit Record Type Mapping AC for the behavior when the user switches to an account whose record type has visit record type mapping configured. - When a field sales rep switches, the account, Place field is automatically updated to the default contact point address of the newly selected account (user's territory's preferred address. If the preferred address isn't set, the account's primary address is pre-populated) - If field sales rep selects one of the attendees of the group visit, the primary account and the attendee are swapped (i.e. the current primary account becomes an attendee and the selected account becomes the primary account) Place: - Place field is filtered by the available contact point address of the selected account excluding inactive address - If Account isn't populated, Place field is empty with "No address related to this account" text - Place field address format is as per the formula field configured in Admin Console - Address Administration - Address setup - In Create Visit, Place field is pre-populated with the field sales rep's territory's preferred address by default. If preferred address isn't set, account's primary address is pre-populated Place - License Icons: - If "Display license validity icons in the visit details" setting is enabled in Admin Console - License Administration - State License Number Setup, field sales rep should be able to view the license validation icon under the address in Place field - The license validity is determined by the formula specified in Admin Console - License Administration - State License Number setup - If the license is valid, show the green tag with the check mark icon + custom label for "JurisdictionState" static enum value for BusinessLicense.ComplianceScope field - If the license isn't valid or a license record for the account's contact point address, show the red tag with the x icon + custom label for "Jurisdiction State" static enum value for BusinessLicense.ComplianceScope field - The default custom label is "State" and it's translatable - If the state license validation isn't enabled, don't show the license icon - If "Apply State Distributor License evaluation" setting is enabled AND the selected contact point address's state is included in State Distributor License States in Admin Console - License Administration - State Distributor License Setup, field sales rep should be able to view the license validation icon in Place field - The license validity is determined by the formula specified in Admin Console - License Administration - State Distributor License Number

Area	User Story	Acceptance Criteria
		- Setup - If the license is valid, show the green tag with the check mark icon + custom label for "Address" static enum value for BusinessLicense.ComplianceScope field - If the license isn't valid or a license record for the account's contact point address doesn't exist, show the red tag with the x icon + custom label for "State Distributor License" static enum value for BusinessLicense.ComplianceScope field - The default custom label is "StateDistributorLicense" and it's translatable - If the State distributor license validation isn't enabled, don't show the license icon - If "Apply Drug Enforcement AdministrationLicense evaluation" is enabled in Admin Console - License Administration - DEA License setup, field sales rep should be able to view the license validation icon in Place field - The license validity is determined by the formula specified in Admin Console - License Administration - DEA Setup - If the license is valid, show the green tag with the checkmark icon + custom label for "State Distributor License" static enum value for BusinessLicense.ComplianceScope field - If the license isn't valid or a license record for the account's contact point address, show the red tag with the x icon + custom label for "Address" static enum value for BusinessLicense.ComplianceScope field - The default custom label is "AddressLicense" and it's translatable - If the DEA license validation isn't enabled, don't show the license icon - If multiple licenses are enabled, the icons are displayed in the order of State, SDL, and DEA Planned Start Time and Planned End Time - If "Set blank date/time in Planned Start Time" setting in Admin Console - Visit Administration - Visit Settings is enabled, - Planned Start Time field is blank by default in Create Visit - If "Set blank date/time in Planned Start Time" settings is disabled, - Current datetime is auto-populated in Planned Start Time in Create Visit - Planned End Time is auto-populated by Planned Start Time + duration set in "Default Visit Duration in Minutes" setting in Admin Console - Visit Administration - Visit Settings - If field sales rep updates Planned Start Time, Planned End Time is automatically updated by Planned Start Time + Default Duration Channel - If the user has read/write access to Channel field, Channel field is displayed - In Channel picklist, configured channels for the selected Visit's page layout by the administrator are displayed - When the visit's channel is a Remote channel type (i.e. a configured channel is set in Remote Visit Channel setting in Admin Console - Remote Engagement), "View Remote Engagement Details" link is displayed below the Channel field. - When the user updates a channel from non-remote channel to a remote channel, the link is available only after the visit is saved - If the user clicks on the link, "Remote Engagement Details" popup opens
Lock Visit Information on Sign	As a field sales rep, I must not be able to edit part of the visit information for which HCP signs, so that I stay compliant	When the parent visit or one of the child visits is signed, Account, Place and Record Type fields of the parent visit is locked. Other fields are not locked (Header of the child visit is always read-only)

Visit Record Type Mapping to Accounts

Figma: N/A

Product Spec: [Account-Level Visit Record Types](#)

Related Data Model:

Area	User Story	Acceptance Criteria
Visit Record Type Mapping	As an field sales rep or medical science liaison (MSL), I must be able to select only the applicable visit record types for my account so that I can capture the information that is relevant to that account	• If an account record type and visit record type mappings are configured by the administrator in Admin Console - Visit Administration - Visit Record Type Mappings, then only the visit record types mapped to the primary account's record type are available in Record Type field in Visit Information ◦ If there are one or more visit record type mappings for the primary account's record type, then only the mapped visit record type is available in the Record Type picklist ◦ If there is no visit record type mapping for the primary account's record type, all the record types assigned to the user's profile are available in the Record Type picklist ◦ The record types are sorted by Sort Order set in Visit Record Type Mappings and the 1st record type is selected by default • If the user saves a visit and the selected record type is no longer the record type assigned to the primary account, an error message: "The current record type is no longer available for this account. Select another record type." is displayed • When in the Visit SPA the user switches the account and the selected record type isn't assigned to the record type of the newly selected account, a warning message: ◦ Title: Change account? ◦ Body: The selected account doesn't have access to this visit type. If you continue, fields and their values may be lost. ◦ Buttons: Cancel / Continue" • If the user confirms to proceed, the page layout associated with the account's default record type is displayed

Presentations (Mobile only) Web is out of scope for 258	As a field sales rep, I must be able to add a presentation to a visit or launch a presentation from the visit, so that I can share approved digital contents to my customers	Content Sidebar (left side): • When a field sales rep expands the Presentations Sidebar, the thumbnail (ContentDocument) and presentation name (Presentation.Name) of 5 most recently opened presentations are displayed in the order of last opened date DESC under the label "Recent" ◦ Last opened date is stored on a device and isn't synced to server ◦ If the presentation name is long, it is wrapped to the 3rd2nd row after that it will truncate ◦ When field sales rep clicks the plus button, the presentation is added to the visit and button is changed to the check mark button ◦ When field sales rep clicks the thumbnail, the presentation is launched ◦ When field sales rep clicks the button with an eye icon, the presentation is launched in preview mode (i.e. Click stream metrics aren't captured) • Below, the 5 most recently opened presentations, "Go to Content Library" button is displayed. ◦ When field user clicks "Go to Content Library" button, the presentations library popup opens ◦ When field user adds recent presentations from the Content Library, they get selected in the sidebar ◦ When field user adds other presentations from the content library, shows the added presentations first in alphabetical order by name and then recent presentations up to max 5 presentations in total ◦ If field user removes one or more presentations added from the Content Library, recent presentations are added back ◦ If field user opens a saved visit, shows the added presentations first in alphabetical order by name and then recent presentations up to max 5 presentations in total

Area	User Story	Acceptance Criteria
		Content section (right side): - When field sales rep adds a presentation from Presentations sidebar or Content Library, the presentation is added to the Presentation section on the right side "Go to Content Library" button is available at the top of the Presentations section - When field sales rep clicks "Go to Content Library" button, the presentations library popup opens - The presentations are displayed in the order of being added - Before playing the presentation (when the presentation is added to the visit beforehand), the thumbnail of the presentation (i.e. thumbnail of the 1st page of the presentation), presentation name, and "0/Y Pages Shared" of the presentation are displayed Note: The thumbnail file is stored in ContentDocument entity PresentationPage.Id = ContentDocumentLink.LinkedEntityId ContentDocumentLink.ContentDocumentId = ContentDocumentId Query to see PresentationPages and Ids of the associated thumbnails: <pre>SELECT Id, Name, Type, (select ContentDocument.Id, ContentDocument.Title, ContentDocument.FileType from ContentDocumentLinks WHERE ContentDocument.Title = 'thumbnail' AND ContentDocument.FileType = 'JPG') FROM PresentationPage WHERE Type = 'ZIP'</pre> - If the presentation name doesn't fit, it will be cut off as there is a lot of space so it doesn't need to wrap, with "..." at the end - When field sales rep clicks the thumbnail, the presentation is launched - When field sales rep clicks Preview button with an eye icon, the presentation is launched in preview mode (i.e. Click stream metrics are not captured) - After playing the presentation, the thumbnails of the played presentation pages are added under the presentation thumbnail area - The number of pages shared ("n/y Pages Shared") is updated - The check mark is displayed for each shared presentation page - If all the presentation page thumbnails don't fit, they scroll horizontally - Under the presentation page thumbnail, the presentation page name (PresentationPage.Name) is displayed - If the presentation page name doesn't fit, it will truncate be cut off with "..." at the end - If the played presentation pages are associated with products and messages, the products and messages are added to Product Discussion section and "From Intelligent Content" tag is displayed next to the product name and below the product messages (see Figma PD.4a) - After playing the presentation and field sales rep clicks on the button to go back to Visit screen, field sales rep can go back to the player by clicking the "Touch to return to Presentation" bar at the top of SPA - The user can preview / launch the presentation after a Signature/Document Id is captured. If a product linked to the played presentation requires signature and the signature is not captured for the product, the product is not silently added to the visit after the presentation slide is shared. Product Restriction: - If a product associated with a presentation's pages is restricted at the account level for the primary account or attendees, field sales rep can't select the presentation (the presentation is disabled with the lock mark button - Figma: PD.4b) - If a product associated with a presentation's pages is restricted at the account-territory level for the primary account or attendees, field sales rep cannot select the presentation (the presentation is disabled with the lock mark button - Figma: PD.4b)) - If both account level product restrictions and account-territory level restrictions are set for the same product, account level restrictions are applied

Area	User Story	Acceptance Criteria
		• If Override Product Restrictions (HealthcareProvider.IsProdtRstrcOverridden) flag is enabled for the account, the product restrictions are by-passed • If field sales rep clicks a presentation associated with a restricted product in the sidebar menu, a warning message popover is displayed: ◦ Title: Product Restrictions ◦ Message: These accounts aren't eligible for {Product Name}: {Account Name1}, {Account Name2}. Targeted Presentation: • Depending on the "Targeting Context" setting in Admin Console - Intelligent Content - Recommended and Targeted Presentations, the presentations available for the account are restricted ◦ If the value = None, there is no restriction ◦ If the value = "Restrict", only the targeted presentations configured in Targeted Presentation Information in Provider Account Territory Information (ProviderAcctTerritoryInfo.TargetedPresentationInfo) are displayed for the account & territory combination ◦ If the value = "Warn", the non-targeted presentations, which are not included in Targeted Presentation Information in Provider Account Territory Information (ProviderAcctTerritoryInfo.TargetedPresentationInfo) are still displayed with a warning message if the field sales rep user selects it ■ Message Text: The selected presentation is not targeted for this account: {0}. Deleting Presentations/Pages: • The user can delete the presentation from the left sidebar or the right section: ◦ When field sales rep clicks check mark button next to the presentation name on the left sidebar or trash icon in the Presentation section on the right side, a delete confirmation message is displayed: ■ Title: Remove presentation? ■ Message: Removing this presentation can also remove the associated products, messages and other tracking data from this visit ■ Button: Cancel/Remove ◦ If field sales rep clicks Remove button, the presentation in the right section is deleted and the button in the left sidebar is changed to + button. ◦ If the products and messages added from the deleted presentation pages are not associated with any other presentation pages, the products and messages added from the deleted presentation are also deleted • The user can delete presentation pages from the right section: ◦ When a field sales rep uncheck the check mark within the presentation page thumbnail in the Presentation section, a delete confirmation message is displayed: ■ Title: Remove page? ■ Message: Removing this page can also remove the associated products, messages, and other tracking data from this visit ■ Button: Cancel/Remove ◦ If field sales rep clicks Remove button, the presentation page in the right section is deleted ■ If all the pages are deleted for a presentation, the presentation is also deleted and the button in the left sidebar is changed to + button. ◦ If the products and messages added from the deleted page isn't associated with any other presentation pages, the products and messages added from the deleted page are also deleted
Save	As a field sales rep, I must be	• When Visit SPA is saved,

Area	User Story	Acceptance Criteria
presentations in Visit	able to save what presentation and presentation pages are shared with my accounts in the database, so that the data are used for reporting and analysis	- o Played presentations in the visit are saved in Presentation Forum entity ■ If "Geolocation Tracking Enabled" setting in Admin Console - Intelligent Content - Settings is enabled, Geolocation, GeolocationDateTime and GeolocationMissingReason are saved - o Click Stream Metrics for the presentation pages shared with the accounts are also saved in Presentation Click Stream Entry ■ The click stream metrics aren't captured if the presentation pages are shared less than 3 seconds ■ The click stream metrics aren't captured if the click stream metrics capturing (Admin Console - Intelligent Content - "Disable Presenter Tracking" setting) is disabled

- [Provider Visit Product Discussion](#)

Area	User Story	Acceptance Criteria
Product Discussion Section - Product Discussion	As a field sales rep / medical science liaison, I must be able to capture additional information related to the products discussed with the health care practitioner so that they can be utilized for the future product marketing and strategy	Add discussions: • Field Sales Rep / Medical Science Liaison can add product discussions related to the detailing product from "+ Add Discussion" link displayed below Product Message section • When field sales rep clicks "+ Add Discussion" link, Discussions section is added below Product Message section • Discussions section is expandable/collapsible and expanded by default Product Discussions Layout: • Depending on the configured record types, Admin Console - Visit Administration - Product Discussion Settings and record types assigned to field sales rep's profile, different Product Discussion page layout is displayed in Discussions section (Refer to Product Discussions Test Patterns) • If no record type is configured for Product Discussion entity ◦ Show the Master page layout ◦ Show no title in the section • If 1 or more record types are configured for Product Discussion entity ◦ If available, record types for the product are NOT configured in Product Discussion Settings ■ If no record type is assigned to field sales rep's profile • Show Master page layout ■ If only 1 record type is assigned to field sales rep's profile • Show the assigned page layout for the record type ■ If multiple record types are assigned to use's profile • Show the list of assigned record type names in the popover. Record type names are wrapped if they don't fit in one row • When field sales rep selects a record type, show the assigned page layout for the record type ◦ If available, record types for the product are configured in Product Discussion Settings ■ If only 1 record type is available for the product in Product Discussion Settings • If the record type isn't assigned to field sales rep's profile ◦ Show Master page layout • If the record type is assigned to field sales rep's profile ◦ Show the assigned page layout for the record type ■ If multiple record types including the available record types for the product are assigned to use's profile • If multiple record types including the available record types for the product are assigned to use's profile ◦ Show the assigned page layout for the available record type for the product ■ If multiple record types are available for the product in Product Discussion Settings • If no record type is assigned to the field sales rep profile ◦ Show Master page layout • If only 1 of the available record types is assigned to field sales rep's profile ◦ Show the assigned page layout for the record type • If multiple record types, including the available record types for the product are assigned to use's profile ◦ Show the list of assigned record type names in the popover

Area	User Story	Acceptance Criteria
		- When field sales rep selects a record type, show the assigned page layout for the record type - If the page layout for the record type is displayed, show the record type name as the title for the section Product Discussion Settings: - If "Add discussion by default" setting is enabled for the detailing product's discussion record type, the discussion section for the record type is added by default when field sales rep selects a detailing product - If "Require discussion on submit" setting is enabled for the product discussion record type, at least 1 discussion for the record type is required when a field sales rep submits a visit. If at least 1 discussion isn't added in a visit, an error message: "(Product Name) requires at least one (Discussion Record Type Name) discussion." is displayed - If "Limit to 1 discussion" setting is enabled for the product discussion record type, field sales rep can't add another product discussion for the same record type - If only this record type is available for the field sales rep, "+ Add Product Discussion" link is hidden - If multiple record types are available for the field sales rep, this record type is hidden in the list of available record types popover - If only one record type becomes available for the field sales rep as a result of hiding this record type, show the assigned page layout for the available record type for the field sales rep without showing the list of available record types popover.
Save Visit	As a field sales rep, I must be able to save the product discussion in the database, so that the data are used for reporting and analysis	When field sales rep saves the Visit SPA, the captured product discussions are saved in ProviderVisitProductDiscussion entity

Area	User Story	Acceptance Criteria
Add	As a field sales rep, I must be	Samples Sidebar (left side in SPA):

Area	User Story	Acceptance Criteria
Samples	able to capture samples disbursed during a visit, so that samples provided to accounts are compliantly tracked in the system	- The Samples sidebar displays all brand products in the field sales rep's territory that are parent products of samples aligned to that territory - Parent 'Brand' or 'Brand-Indication' products in field sales rep's territory: - Display Name: LifeSciMarketableProduct.Name - Filtering Condition: - LifeSciMarketableProduct.Type = 'Brand' or 'Brand-Indication' - LifeSciMarketableProduct.Product = sample's LifeSciMarketableProduct.ParentBrandProduct - LifeSciMarketableProduct.ProductId = ProductTerritoryAvailability.ProductId AND - ProductTerritoryAvailability.Purpose = 'Visit' AND Territory = field sales rep's territory (ProductTerritoryAvailability.AlignmentType = 'Inclusion' AND Territory = field sales rep's territory OR ProductTerritoryAvailability.AlignmentType = 'Inclusion and Subordinates Inclusion' AND Territory = all the territories above the field sales rep's territory (i.e. Territory2.ParentTerritory2, it's parent... up to the top of the hierarchy)) - ProductTerritoryAvailability.Status = 'Active' - Do not show products excluded for field sales rep's territory: - ProductTerritoryAvailability.AlignmentType = 'Territory Exclusion' AND Territory = field sales rep's territory - Show only active products (LifeSciMarketableProduct.IsActive = 'True') - Show only client products (LifeSciMarketableProduct.IsCompetitorProduct != 'True') - Show only valid products as of visit's Planned Start Time (the product's StartDate is null or StartDate <= Visit's Planned Start Time) AND (EndDate is null or Visit's Planned Start Time <= the product's EndDate) - Samples that are aligned to user's territory: - LifeSciMarketableProduct.Type = 'Product' (LifeSciMarketableProduct.AllowedDistributionMethod = 'Drop' OR 'Drop and Ship') AND - LifeSciMarketableProduct.ProductId = Product2.Id - LifeSciMarketableProduct.ProductSpecificationType = 'LSSampleProduct' - Product2.SpecificationType = 'LSSampleProduct' - LifeSciMarketableProduct.ProductId = ProductTerritoryAvailability.ProductId AND - ProductTerritoryAvailability.Purpose = 'Visit' AND (ProductTerritoryAvailability.AlignmentType = 'Inclusion' AND Territory = field sales rep's territory OR - ProductTerritoryAvailability.AlignmentType = 'Inclusion and Subordinates Inclusion' AND Territory = all the territories above the field sales rep's territory (i.e. Territory2.ParentTerritory2, it's parent... up to the top of the hierarchy)) - ProductTerritoryAvailability.Status = 'Active' - Products not excluded from field sales rep's territory (ProductTerritoryAvailability.AlignmentType = 'Territory Exclusion' AND Territory = field sales rep's territory) - Active products (LifeSciMarketableProduct.IsActive = True) - Client products (LifeSciMarketableProduct.IsCompetitorProduct != True) - Valid products as of visit's Planned Start Time: (the product's StartDate is null or StartDate <= Visit's Planned Start Time) AND (EndDate is null or Visit's Planned Start Time <= the product's EndDate) - The parent brand products are displayed in the configured sort order: - If territory-level product sort orders are configured for field sales rep's territory, products are sorted by product territory sort order (ProductTerritoryAvailability.SortOrder). If territory-level product sort orders are not configured for field sales rep's territory, products are sorted by product's sort order (LifeSciMarketableProduct.SortOrder)

Area	User Story	Acceptance Criteria
		■ If the sort order is blank or the same, sort by alphabetical order ■ Products with the sort order populated are displayed higher than products with the empty sort order Product Restrictions: ○ If the parent detailing product is restricted at the account level for the primary account or attendees, field sales rep cannot select the product (the product is disabled with the lock mark button - Figma: PD.4b) so that field sales rep cannot add its child samples ○ If the parent detailing product is restricted at the account-territory level for the primary account or attendees and field sales rep's territory, field sales rep cannot select the product (the product is disabled with the lock mark button - Figma: PD.4b)) so that field sales rep cannot add its child marketing items ○ If both account level product restrictions and account-territory level restrictions are set for the same product, account level restrictions are applied ○ If Override Product Restrictions (HealthcareProvider.IsProdRstrcOverridden) flag is enabled for the account, the product restrictions are by-passed ○ If field sales rep clicks a restricted product in the sidebar menu, a warning message popover is displayed: ■ Title: Product Restrictions ■ Message: These accounts aren't eligible for {Product Name}: {Account Name1}, {Account Name2}. ● When field sales rep clicks + button next to the product name, the button is changed to check mark button and the parent brand section is added within Sample section on the right side of SPA below Product Discussions section Samples Section (right side in SPA): ● Samples section is expandable/collapsible and expanded by default ● Samples section is displayed for HCOs based on "HCO Types Allowed for Samples and Items" setting in Admin Console - Visit Administration - Visit Settings: ○ If HCO's record type is selected in the setting, Samples section is displayed and enabled ○ If HCO's record type is not selected in the setting, Samples section is displayed and disabled ● Under Sample section, the parent brand section is displayed in the section header. ○ The parent brand section's title is the product name ○ The parent brand section is expandable/collapsible and expanded by default ○ In the section, the configured fields from Samples related list of applicable Visit page layout, including Sample, Batch, and Quantity are displayed ■ Sample, Batch and Quantity fields and additional fields up to max 5 total are displayed ■ In order for the samples section to work, Sample and Quantity fields need to be configured and they are displayed as required fields with red asterisk icon ■ Production Batch field needs to be configured if customers manage their sample inventory in LSC ● Production Batch field is required based on "Require batch number" setting in Admin Console - Visit Administration - Visit Settings: ○ If enabled (enabled by default), Batch field is required ○ If disabled, Batch field is not required ○ If disabled and Production Batch field is not configured, it is not displayed ○ Sample (picklist) ■ Show all the child sample products of the selected parent brand product ● Display Name: Product2.Name ● Filtering conditions: Samples that are aligned to field sales rep's territory ■ The samples are sorted by product's sort order (LifeSciMarketableProduct.SortOrder) ● If the sort order is blank or the same, sort by alphabetical order ● Products with the sort order populated are displayed higher than products with the empty sort order ■ If only one sample is available, auto-select it by default. Otherwise, the field is blank by default ■ The user can select a sample from the picklist

Area	User Story	Acceptance Criteria
		○ Batch (picklist) ■ Show batches that are allocated to the field sales rep: ● Display name: ProductionBatch.UniquelIdentificationNumber ● Make sure Batch field has enough width to show 10 alphanumeric characters so that it won't be cut off ● Filtering Conditions (AND conditions): ○ LifeSciMarketableProduct.ProductId = Selected sample ○ LifeSciMarketableProduct.ProductId = Product2.Id ○ ProductionBatch.ProductId = Product2.Id ○ Show only active batch (ProductionBatch.IsActive = 'True') ○ Expired batch (ProductionBatch.ExpirationDate < Visit's Planned Start Time) is displayed based on "Show expired batches" setting in Admin Console - Visit Administration - Visit Settings: ■ If disabled (disabled by default), show only batches that are not expired (ExpirationDate = null or ExpirationDate < Visit's Planned Start Time) ■ If enabled, show also expired batches ○ ProductionBatch.Id = ProductBatchItem.ProductionBatch ○ Show batches in user's location: ■ ProductItem.ProductId = Product2.Id ■ ProductItem.Location = Location.Id ■ ProductBatchItem.Location = Location.Id ■ Location.LocationType = InventoryManagementSettings.LocationType (Admin Console - Inventory Management - Location Type setting) ■ Location.PrimaryUserId = Current field sales rep ○ Show only active batch allocation (ProductBatchItem.IsActive = 'True') ● Do not show batches with 0 remaining quantity: (Note: the custom permission to hide batches(lots) with 0 remaining quantity in OCE is dropped and we make it a default behavior. We still show batches with 0 remaining quantity in the allocation popup) ○ ProductBatchItem.RemainingQuantity = 0 ○ ProductBatchItem.ProductBatchId = ProductionBatch.Id ■ Batches are sorted by UniquelIdentificationNumber (Note: Setting to define the sort order in OCE is dropped) ■ If only one batch is available, auto-select it by default. Otherwise, the field is blank by default ■ The user can select a batch from the picklist ○ Quantity ■ If the default quantity (LifeSciMarketableProduct.DefaultDistributionQuantity) is set, show the default quantity. Otherwise, the quantity field is blank by default ■ The user can edit the quantity using up/down arrow or direct input with keyboard (Note: Numpad in OCE is deprecated because we don't have equivalent component in LSDS) ■ Make sure Quantity field has enough width to show 4 digits ○ When field sales rep click "+ Add Another" link at the bottom of the section, another row is added and field sales rep can enter another sample related to the same brand ■ The user can select the same sample as the already added sample or another sample related to the same brand ■ If field sales rep selects the same sample as the already-added sample, do not show the batch number already selected for the same sample Deleting Samples:

Area	User Story	Acceptance Criteria
		- The user can delete the samples at the parent detailing product level from the left sidebar or the right section: - When field sales rep clicks check mark button next to the product name on the left sidebar or clicks 3 dots icon and select "Remove" from the menu in the Sample section on the right side, a delete confirmation message is displayed: - Title: Remove product? - Body: Do you want to remove {product name} and its details from this visit? - Button: Cancel / Remove - After field sales rep confirms the message, the parent detailing product section within the right sample section is deleted and the button in the left sidebar is changed to + button. - When the parent detailing product section is deleted, all the child samples are deleted - The user can delete a sample from the right section - When field sales rep clicks trash icon next to the sample row, a delete confirmation message is displayed: - Title: Remove product? - Body: Do you want to remove {product name} and its details from this visit? - Button: Cancel / Remove - After field sales rep confirms the message, the sample row is deleted
Lock Samples on Sign	As a field sales rep, I must not be able to edit samples for which HCP signs, so that I stay compliant	- After a signature or Document ID is captured, indicate "Signature Captured" in the Samples section on the right side - After a signature or Document ID is captured, field sales rep cannot update some of the sample products depending on the product's Signature Requirement Level (LifeSciMarketableProduct.SignatureRequirementLevel): - Samples with Signature Requirement Level = "Mandatory" - The user cannot add samples (samples are not displayed in the picklist) - The user cannot edit or delete the samples, including the batch, quantity and additional configured fields (the fields are disabled) - If there is no sample in Sample picklist, the parent detail product is hidden in Samples sidebar - Samples with Signature Requirement Level = "Optional" - The user can add samples (samples are displayed in the picklist) - The user cannot edit or delete the samples, including the batch, quantity and additional configured fields (the fields are disabled) - Samples with Signature Requirement Level = "Not Required" or blank - The user can add samples - The user can edit or delete the samples, including the batch, quantity and additional configured fields
Save Samples	As a field sales rep, I must be able to save the samples disbursed in a visit, so that the sample inventories are tracked in the system	- When field sales rep saves the Visit SPA without getting a signature, - Product Disbursement records are created/updated with IsDisbursement = 'False' - When field sales rep signs or capture Document ID in the Visit SPA, - Product Disbursement records are created/updated with IsDisbursement = 'True' for samples for which Signature/Document ID is captured - ProductItemTransaction records with Transaction Type = 'Consumed' are created at server side (not created offline) - Sample batch remaining quantities (ProductBatchItem.RemainingQuantity and ProductItem.QuantityOnHand) are updated at server side (not created offline) based on ProductItemTransaction records - If field sales rep proceeds with a warning for backdated sample disbursement, Backdated Signature Validation Skipped flag (ProviderVisit.IsBackdatedSgnVldSkipped) is updated to True - When field sales rep submits the Visit SPA, - Product Disbursement records are created/updated with IsDisbursement = 'True' for samples for which Signature/Document ID is not captured

Area	User Story	Acceptance Criteria
		- ProductItemTransaction records with Transaction Type = 'Consumed' are created at server side (not created offline) - Sample batch remaining quantities (ProductBatchItem.RemainingQuantity) are updated at server side (not created offline) - If field sales rep proceeds with a warning for backdated sample disbursement, Backdated Submit Validation Skipped flag (ProviderVisit.IsBackdatedSbmtVldSkipped) is updated to True

Samples Inventory Validation

Figma: [Samples](#)

Product Spec: [Sample Limits](#)

Related Data Model:

- Max per Visit Limit: [Territory Product Quantity Allocation](#) (TerritoryProdQtyAllocation)
- Sample Inventory: [Production Batch](#), [Product Batch Item](#), [Location](#)

Area	User Story	Acceptance Criteria
Product Inventory Popup	As a field sales rep, I must be able to see the remaining sample inventory quantity and max per visit limit for samples, so that I can confirm the available quantity as well as the limit before providing them to my accounts during a visit	- Depending on "Validate sample inventory" setting in Admin Console - Visit Administration - Visit Settings, "Product Inventory" menu is available from 3 dots menu next to samples in Samples Sidebar (Figma) or 3 dots button in Samples section (Figma S.5b) - If the setting is disabled, the menu isn't available - If the setting is enabled, the menu is available regardless of whether Sample Inventory and/or Max per Visit Limit records exist (Existing OCE behavior: WU is created to see if we can hide the menu if the records don't exist). - When field sales rep clicks "View Product Inventory" from 3 dots menu, Product Inventory popup opens - For each sample product, the following information is displayed: - Sample Product Name - The samples are sorted by the product's sort order (LifeSciMarketableProduct.SortOrder) from the left 3 cards of samples are displayed per row - Max Per Visit Limit (if available) - TerritoryProdQtyAllocation.MaxDisbursementLimitQty - TerritoryProdQtyAllocation.ProductId = the sample product - TerritoryProdQtyAllocation.TerritoryId = field sales rep's territory - TerritoryProdQtyAllocation.AllocationType = 'Drop' - TerritoryProdQtyAllocation.TimePeriodId = Timeperiod.Id - TimePeriod.StartDate <= Visit.PlannedStartDateTime <= TimePeriod.EndDate - Batch Number and Inventory - Batch Number: ProductionBatch.UniqueIdentificationNumber - Inventory: ProductBatchItem.Remaining Quantity - Sum of ProductDisbursements' quantities in signed/submitted visits that aren't yet synced - Sample batches allocated to the field sales rep: - ProductBatchItem.ProductBatchId = ProductionBatch.Id - ProductionBatch.CreationLocationId = Location.Id - Location.PrimaryUserId = Current field sales rep

Area	User Story	Acceptance Criteria
		○ ProductBatchItem.IsActive = 'True' ○ ProductionBatch.IsActive = 'True' ○ Include expired batch (ProductionBatch.ExpirationDate < Visit's Planned Start Time) based on "Show expired batches" setting in Admin Console - Visit Administration - Visit Settings: ■ If disabled (disabled by default), don't include expired batches ■ If enabled, include expired batches ○ Include batches with 0 remaining quantity • The batches are sorted by UniqueIdentificationNumber ○ If the Sample Inventory does not exist for the product and user combination and Max per Visit Limit records do not exist for the product and territory combinations, show a message in the popup: "Product inventory isn't available for this product".

Area	User Story	Acceptance Criteria
Product Inventory Validation	As a field sales rep, I must be blocked or warned if my sample quantity is exceeding my available inventory or max per visit limit, so that I can take proper decision to follow my company rules	• The product inventory validation is enabled by "Validate sample inventory" setting in Admin Console - Visit Administration - Visit Settings • Validation mode (Error/Warning) is determined by "Sample Inventory Validation Mode" setting in Admin Console - Visit Administration - Visit Settings Error Mode: Link to this flow chart Error Mode: <pre>graph LR A[Add Samples] --> B[Sign] B --> C[Check Remaining Qty (Offline)] C --> D{Exceed Qty?} D -- No --> F[Check Internet Connection] D -- Yes --> E[Error Message] E -- OK --> A F --> G{Wifi is On?} G -- No --> H[Capture Signature] G -- Yes --> I[Check Remaining Qty (Online + Pending Transactions)] I --> J{Exceed Qty?} J -- No --> H J -- Yes --> K[Error Message] K -- OK --> H K -- No --> L[Capture Signature] Note[If wifi-is off, skip online validation] -.-> H</pre> • The validation is run first offline and show the error if the quantity exceeds the inventory remaining quantity or max per visit limit (Mobile) ◦ Refer to Sample Inventory Validation(Error) for validation timing and error message • If the offline validation is passed and the device is connected to the internet, the validation is run against the online database. If the quantity exceeds the inventory remaining quantity or max per visit limit, show an error ◦ If the device is not connected to the internet, the online validation is skipped ◦ Refer to Sample Inventory Validation (Online Error) for validation timing and error message Warning Mode: Link to this flow chart <pre>graph LR A[Add Samples] --> B[Sign] B --> C[Check Remaining Qty (Offline)] C --> D{Exceed Qty?} D -- No --> F[Capture Signature] D -- Yes --> E[Warning Message] E -- Confirm --> F E -- Cancel --> A</pre> • The validation is run offline only and show the warning if the quantity exceeds the inventory remaining quantity or max per visit limit (Mobile) ◦ Refer to Sample Inventory Validation (Warning) for validation timing and error message • If a field sales rep proceeds with the warning, Validation Type and Warning Message are captured in Product Disbursement entity: ◦ When max per visit limit is exceeded, ■ ViolationType = "Maximum Quantity Per Visit Exceeded" ■ WarningMessage = the displayed warning message texts on UI ◦ When the remaining quantity is exceeded, ■ ViolationType = "Product Inventory Exceeded" ■ WarningMessage = the displayed warning message texts on UI Note: In case the validation is in error mode and the remaining quantity is not exceeded in iPad, but exceeded when the product disbursement records are synced to the server, a sample inventory save hook will block the transaction and populate Violation Type and Warning Message fields.

Area	User Story	Acceptance Criteria
		◦ ViolationType = "Product Inventory Exceeded" ◦ WarningMessage = (Hard-coded) The quantity for {Product Name}, Batch: {Batch Number} exceeds the remaining sample inventory ({n}).

Direct to Practitioner

- Figma: [DTP](#)
Product Spec: Direct to Practitioner
Related Data Model:
- [Provider Visit Requested Sample](#)
 - Sample Product: [Life Science Marketable Product](#), Product2
 - Product Restriction: [Life Science Product Account Restriction](#)

Area	User Story	Acceptance Criteria
Add Direct to Practitioner samples	As a field sales rep, I must be able to capture samples that are directly shipped to physicians in a visit, so that samples provided to accounts are tracked in the system	Direct to Practitioner Sidebar (left side in SPA): • The Direct to Practitioner sidebar displays all brand products in the field sales rep's territory that are parent products of Direct to Practitioner samples aligned to that territory ◦ Parent 'Brand' or 'Brand-Indication' products in field sales rep's territory: ■ Display Name: LifeSciMarketableProduct.Name ■ Filtering Condition: • LifeSciMarketable.Type = 'Brand' or 'Brand-Indication' • LifeSciMarketable.Product = sample's LifeSciMarketableProduct.ParentBrandProduct • LifeSciMarketableProduct.ProductId = ProductTerritoryAvailability.ProductId AND • ProductTerrDtlAvailability.Purpose = 'Visit' AND Territory = field sales rep's territory • (ProductTerrDtlAvailability.AlignmentType = 'Inclusion' AND Territory = field sales rep's territory OR ProductTerrDtlAvailability.AlignmentType = 'Inclusion and Subordinates Inclusion' AND Territory = all the territories above the field sales rep's territory (i.e. Territory2.ParentTerritory2, its parent ... up to the top of the hierarchy)) • ProductTerrDtlAvailability.Status = 'Active' • Do not show products excluded for field sales rep's territory: ◦ ProductTerritoryAvailability.AlignmentType = 'Territory Exclusion' AND Territory = field sales rep's territory • Show only active products (LifeSciMarketableProduct.IsActive = 'True') • Show only client products (LifeSciMarketableProduct.IsCompetitorProduct != 'True') • Show only valid products as of visit's Planned Start Time ◦ (the product's StartDate is null or StartDate <= Visit's Planned Start Time) AND ◦ (EndDate is null or Visit's Planned Start Time <= the product's EndDate) ◦ Direct to Practitioner samples that are aligned to use's territory: ■ LifeSciMarketableProduct.Type = 'Product' ■ (LifeSciMarketableProduct.AllowedDistributionMethod = 'Ship' OR 'Drop and Ship') AND

Area	User Story	Acceptance Criteria
		■ LifeSciMarketableProduct.ProductId = Product2.Id ■ Product2.SpecificationType = 'LSSampleProduct' ■ LifeSciMarketableProduct.ProductSpecificationType = 'LSSampleProduct' ■ LifeSciMarketableProduct.ProductId = ProductTerrDtAvailability.ProductId AND ■ ProductTerrDtAvailability.Purpose = 'Visit' AND ■ (ProductTerrDtAvailability.AlignmentType = 'Inclusion' AND Territory = field sales rep's territory OR ProductTerrDtAvailability.AlignmentType = 'Inclusion and Subordinates Inclusion' AND Territory = all the territories above the field sales rep's territory (i.e. Territory2.ParentTerritory2, it's parent... up to the top of the hierarchy)) ■ ProductTerrDtAvailability.Status = 'Active' ■ Don't show products excluded for field sales rep's territory: ● ProductTerrDtAvailability.AlignmentType = 'Territory Exclusion' AND Territory = field sales rep's territory ■ Show only active products (LifeSciMarketableProduct.IsActive = True) ■ Show only client products (LifeSciMarketableProduct.IsCompetitorProduct != True) ■ Show only valid products as of visit's Planned Start Time ● (the product's StartDate is null or StartDate <= Visit's Planned Start Time) AND ● (EndDate is null or Visit's Planned Start Time <= the product's EndDate) ● The parent brand products are displayed in the configured sort order: ○ If territory-level product sort orders are configured for field sales rep's territory, products are sorted by product territory sort order (ProductTerrDtAvailability.SortOrder). If territory-level product sort orders are not configured for field sales rep's territory, products are sorted by product's sort order (LifeSciMarketableProduct.SortOrder) ■ If the sort order is blank or the same, sort by alphabetical order ■ Products with the sort order populated are displayed higher than products with the empty sort order Product Restrictions: ○ If the parent detailing product is restricted at the account level for the primary account or attendees, field sales rep cannot select the product (the product is disabled with the lock mark button - Figma: PD.4b) so that field sales rep cannot add its child marketing items ○ If the parent detailing product is restricted at the account-territory level for the primary account or attendees and field sales rep's territory, field sales rep cannot select the product (the product is disabled with the lock mark button - Figma: PD.4b)) so that field sales rep cannot add its child samples ○ If both account level product restrictions and account-territory level restrictions are set for the same product, account level restrictions are applied ○ If Override Product Restrictions (HealthcareProvider.IsProdtRstrcOverridden) flag is enabled for the account, the product restrictions are by-passed ○ If field sales rep clicks a restricted product in the sidebar menu, a warning message popover is displayed: ■ Title: Product Restrictions ■ Message: These accounts aren't eligible for {Product Name}: {Account Name1}, {Account Name2}. ● When field sales rep clicks + button next to the product name, the button is changed to check mark button and the parent brand section is added within Sample section on the right side of SPA below Product Discussions section Direct to Practitioner Section (right side in SPA): ● Direct to Practitioner section is expandable/collapsible and expanded by default ● Direct to Practitioner section is displayed for HCOs based on "HCO Types Allowed for Samples and Items" setting in Admin Console - Visit Administration - Visit Settings: ○ If HCO's record type is selected in the setting, Direct to Practitioner section is displayed and enabled ○ If HCO's record type is not selected in the setting, Direct to Practitioner section is displayed and disabled

Area	User Story	Acceptance Criteria
		- Under Direct to Practitioner section, "Ship To" and "Shipping Address" fields are displayed "Ship To" field shows the same account information as the Visit Information (Account Name + Professional Title/Record Type Name) and it's not editable "Shipping Address" shows the same list of addresses as Place field in Visit Information (the available contact point address of the selected account excluding inactive address) - The shipping address format is as per the formula field configured in Admin Console - Address Administration - Address setup - If no address is available, show "No address related to this account." - If only one address is available, auto-populate it by default. Otherwise, the field is blank by default (to make sure field sales rep confirms and selects the correct shipping address) - If multiple addresses are available, show "TBD" Shipping Address - License Icons: - If "Evaluate license validity and show icon in visit" setting is enabled in Admin Console - License Administration - State License Number setup, field sales rep should be able to view the license validation icon under the address in Shipping Address field - The license validity is determined by the formula specified in Admin Console - License Administration - State License Number Setup - If the license is valid, show the green tag with the check mark icon + custom label for "JurisdictionState" static enum value for BusinessLicense.ComplianceScope field - If the license isn't valid or a license record for the account's contact point address, show the red tag with the x icon + custom label for "Jurisdiction State" static enum value for BusinessLicense.ComplianceScope field - The default custom label is "State" and it's translatable - If the state license validation isn't enabled, don't show the license icon - If "Apply State Distributor License evaluation" setting is enabled AND the selected contact point addresses is included in State Distributor License States Setup in Admin Console - License Administration - State Distributor License Setup, field sales rep should be able to view the license validation icon in Shipping Address field - The license validity is determined by the formula specified in Admin Console - License Administration - State Distributor License Number setup - If the license is valid, show the green tag with the check mark icon + custom label for "Address" static enum value for BusinessLicense.ComplianceScope field - If the license isn't valid or a license record for the account's contact point address doesn't exist, show the red tag with the x icon + custom label for "State Distributor License" static enum value for BusinessLicense.ComplianceScope field - The default custom label is "SDL" and it's translatable - If the State distributor license validation isn't enabled, don't show the license icon - If "Apply Drug Enforcement AdministrationLicense evaluation" setting is enabled in Admin Console - License Administration - DEA License Setup, field sales rep should be able to view the license validation icon in Shipping Address field - The license validity is determined by the formula specified in Admin Console - License Administration - DEA Setup - If the license is valid, show the green tag with the checkmark icon + custom label for "State Distributor License" static enum value for BusinessLicense.ComplianceScope field - If the license isn't valid or a license record for the account's contact point address, show the red tag with the x icon + custom label for "Address" static enum value for BusinessLicense.ComplianceScope field - The default custom label is "DEA" and it's translatable - If the DEA license validation isn't enabled, don't show the license icon - If multiple licenses are enabled, the icons are displayed in the order of State, SDL, and DEA - Under "Ship To" and "Shipping Address" fields, the parent brand section is displayed. - The section's title is the product name

Area	User Story	Acceptance Criteria
		- o The parent brand section is expandable/collapsible and expanded by default - o The configured fields from Provider Visit Requested Sample related list of applicable Visit page layout, including Sample and Quantity are displayed ■ Sample and Quantity fields are displayed and marked as required fields with a red asterisk icon. Additional fields up to max 5 total (i.e. 3 additional fields) are displayed. - o Sample (picklist) ■ Show all the child Direct to Practitioner sample products of the selected parent brand product ● Display Name: Product2.Name ● Filtering conditions: Direct to Practitioner samples that are aligned to field sales rep's territory ■ The samples are sorted by product's sort order (LifeSciMarketableProduct.SortOrder) ● If the sort order is blank or the same, sort by alphabetical order ● Products with the sort order populated are displayed higher than products with the empty sort order ■ If only one sample is available, auto-select it by default. Otherwise, the field is blank by default ■ The user can select a sample from the picklist - o Quantity ■ If the default quantity (LifeSciMarketableProduct.DefaultDistributionQuantity) is set, show the default quantity. Otherwise, the quantity field is blank by default ■ The user can edit the quantity using up/down arrow or direct input with keyboard (Note: Numpad in OCE is deprecated because we don't have equivalent component in SDFS - Salesforce Design System) ■ Make sure Quantity field has enough width to show 4 digits - o When field sales rep click "+ Add Another" link at the bottom of the section, another row is added and field sales rep can enter another sample related to the same brand ■ The user cannot select the same sample as the already added sample (the sample is not available in the picklist) Deleting Direct to Practitioner samples: ● The user can delete the samples at the parent detailing product level from the left sidebar or the right section: - o When field sales rep clicks check mark button next to the product name on the left sidebar or clicks 3 dots icon and select "Remove" from the menu in the Direct to Practitioner section on the right side, a delete confirmation message is displayed: ■ Title: Remove product? ■ Body: Do you want to remove {product name} and its details from this visit? ■ Button: Cancel / Remove - o After field sales rep confirms the message, the parent detailing product section within the right Direct to Practitioner section is deleted and the button in the left sidebar is changed to + button. - o When the parent detailing product section is deleted, all the child samples are deleted ● The user can delete a sample from the right section - o When field sales rep clicks trash icon next to the sample row, a delete confirmation message is displayed: ■ Title: Remove product? ■ Body: Do you want to remove {product name} and its details from this visit? ■ Button: Cancel / Remove - o After field sales rep confirms the message, the sample row is deleted

Area	User Story	Acceptance Criteria
Lock Direct to Practitioner samples on Sign	As a field sales rep, I must not be able to edit Direct to Practitioner samples for which HCP signs, so that I stay compliant	- After a signature or Document ID is captured, indicate "Signature Captured" in the Samples section on the right side - After a signature or Document ID is captured, field sales rep cannot update some of the sample products depending on the product's Signature Requirement Level (LifeSciMarketableProduct.SignatureRequirementLevel): - Samples with Signature Requirement Level = "Mandatory" - The user cannot add samples (samples are not displayed in the picklist) - The user cannot edit or delete the samples, including the quantity and additional configured fields (the fields are disabled) - If there is no sample in Sample picklist, the parent detail product is hidden in Samples sidebar - Samples with Signature Requirement Level = "Optional" - The user can add samples (samples are displayed in the picklist) - The user cannot edit or delete the samples, including the quantity and additional configured fields (the fields are disabled) - Samples with Signature Requirement Level = "Not Required" or blank - The user can add samples - The user can edit or delete the samples, including the quantity and additional configured fields
Save Visit	As a field sales rep, I must be able to save the Direct to Practitioner samples captured in a visit, so that the samples provided to the HCPs are tracked in the system	- When field sales rep saves the Visit SPA, - Provider Visit Requested Sample records are created/updated - When field sales rep signs or capture Document ID in the Visit SPA, - Provider Visit Requested Sample records are created/updated - When field sales rep submits the Visit SPA, - Provider Visit Requested Sample records are created/updated

Direct to Practitioner Product Allocation Validation

Figma: [DTP](#)

Product Spec: [Product Allocation](#)

Related Data Model:

- [Territory Product Quantity Allocation](#) (TerritoryProdtQtyAllocation)

Area	User Story	Acceptance Criteria
Product Allocation Popup	As an field sales rep, I must be able to see the product allocation, remaining quantity, and max per visit limit for direct-to-practitioner samples, so that I can confirm the available quantity as well as the limit before providing them	- Depending on "Validate territory quantity allocation" setting in Admin Console - Visit Administration - Visit Settings, "Product Allocation" menu is available from 3 dots menu next to samples in Direct to Practitioner Sidebar (Figma) or 3 dots button in Samples section (Figma S.5b) - If the setting is disabled, the menu isn't available - If the setting is enabled, the menu is available regardless of whether Product Allocation and Max per Visit records exist (Existing OCE behavior. WJ is created to see if we can hide the menu if the records don't exist). - When user clicks "View Product Allocation" from 3 dots menu, Product Allocation popup opens - For each sample product, the following information is displayed:

Area	User Story	Acceptance Criteria
	to my accounts during a visit	■ Sample Product Name • The samples are sorted by the product's sort order (LifeSciMarketableProduct.SortOrder) from the left • 3 cards of samples are displayed per row ■ Remaining • TerritoryProdQtyAllocation.RemainingQuantity • TerritoryProdQtyAllocation.TerritoryId = user's territory • TerritoryProdQtyAllocation.AllocationType = 'Ship' • TerritoryProdQtyAllocation.TimePeriodId = Timeperiod.Id • TimePeriod.StartDate <= Visit.PlannedStartDateTime <= TimePeriod.EndDate ■ Max per Visit • TerritoryProdQtyAllocation.MaxDisbursementLimitQty • TerritoryProdQtyAllocation.TerritoryId = user's territory • TerritoryProdQtyAllocation.AllocationType = 'Ship' • TerritoryProdQtyAllocation.TimePeriodId = Timeperiod.Id • TimePeriod.StartDate <= Visit.PlannedStartDateTime <= TimePeriod.EndDate ○ If the Territory Product Quantity Allocation record does not exist for the sample product and territory combination, show a message in the popup: "Product allocation isn't available for this product".
Product Allocation Validation	As a field sales rep, I must be blocked or warned if my sample quantity is exceeding my available inventory or max per visit limit, so that I can take proper decision to comply with my company rules	• The product inventory validation is enabled by "Validate territory quantity allocation" setting in Admin Console - Visit Administration - Visit Settings • Validation mode (Error/Warning) is determined by "Territory Quantity Allocation Validation Mode" setting in Admin Console - Visit Administration - Visit Settings Error Mode: • Show an error if the quantity exceeds the remaining quantity or max per visit limit (Mobile) ○ Refer to Product Allocation Validation (Error) for validation timing and error message Warning Mode: • Show a warning if the quantity exceeds the remaining quantity or max per visit limit (Mobile) ○ Refer to Product Allocation Validation (Warning) for validation timing and error message • If user proceeds with the warning, Validation Type and Warning Message are captured in ProviderVisitRequestedSample entity: ○ When max per visit limit is exceeded, ■ ViolationType = "Maximum Quantity Per Visit Exceeded" ■ WarningMessage = the displayed warning message texts on UI ○ When the remaining quantity is exceeded, ■ ViolationType = "Product Allocation Exceeded" ■ WarningMessage = the displayed warning message texts on UI

Sample Limits

[Provider Visit Sample Limit Transaction \(PrvdVstSmpLmtTransaction\)](#)

Area	User Story	Acceptance Criteria
Sample Limits Popup for Samples and Direct to Practitioner Samples	As a field sales rep, I must be able to check at any time the sample limits for my account, so that I know ahead how many samples I can disburse in the visit	• Sample Limits popup to view sample limits rules is enabled for Samples and Direct to Practitioner samples based on "Validate sample limits" setting in Admin Console - Visit Administration ◦ If it is not enabled, "View Sample Limits" menu is not available ◦ If it is enabled, "View Sample Limits" menu is available in 3 dots menu in Samples or Direct to Practitioner Sidebar (left side) and Samples and Direct to Practitioner section (right side) ■ For mature products that Italy Class A or Italy Class C Template is applied (i.e. the limits are shared between different parent detail products and sample products) • The popup is accessible only from 3 dots menu next to Samples and Direct to Practitioner Sidebar on the left side of Visit SPA (See Figma S.6) Note: Since the limits are shared at the parent detail product level it is not possible to see the limits on the right panel as in the case below where the limit is at the individual product level since that could confuse the sales rep into thinking they has more product limit / allocation to share than they did. • The popup shows the following information of the mature products under expandable/collapsible section for Italy Class A and/or Italy Class C templates ◦ Title: Sample Limits ◦ Text: Some products shown here belong to Classes with limits ◦ Section: "Class A Products" or "Class C Products" ◦ Fields: ■ Allowed per Period: ■ Period Length: ■ Remaining Quantity: ■ Allowed per Visit: ■ Last Delivery Date (only if available) ■ For new products that Italy Class A or Italy Class C Template is applied or other templates are applied • The popup is accessible from 3 dots menu next to Samples Sidebar on the left side of Visit SPA • The popup is accessible from 3 dots menu next to Samples section on the right side of Visit SPA • The popup shows the following information. Test each template as per Fields in Sample Limits Popup ◦ Title: Sample Limits ◦ Text: Limits for this product: ◦ Fields: ■ Allowed per Period: ■ Period Length: ■ Remaining Quantity: ■ Allowed per Visit: ■ Last Delivery Date (only if available) • In case of Italy Class A and Italy Class C templates, both the new products and mature products information are displayed in the popup ■ Test each template as per Sample Limits Popup Access

Area	User Story	Acceptance Criteria
Sample Limits Validation for Samples and Direct to Practitioner Samples	As a field sales rep, I must be blocked or warned when I attempt to provide more samples than allowed quantity for my account, so that I remain compliant with regulatory and company policies.	- Sample Limits validation is enabled based on "Validate sample limits" setting in Admin Console - Visit Administration - The validation mode (Error/Warning) is determined by the type of template. See Validation Mode for each template - If the setting is enabled, but the provider sample limit record does not exist for the account and product combination, show an error: "Sample limits aren't available for this account and product. Ask your Salesforce admin for help." Error Mode: Link to this flow chart Error Mode: <pre> graph LR A[Add Samples] --> B[Sign] B --> C[Check Remaining Qty (Offline)] C --> D{Exceed Qty?} D -- No --> E[Check Internet Connection] D -- Yes --> F[Error Message] F -- OK --> B E --> G{Wifi is On?} G -- Yes --> H[Check Remaining Qty (Online + Pending Transactions)] G -- No --> I[Capture Signature] H --> J{Exceed Qty?} J -- No --> I J -- Yes --> K[Error Message] K -- OK --> B </pre> - The validation is run first offline and show the error if the quantity exceeds the sample limits remaining quantity or max per visit limit (Mobile) - Refer to Sample Limits Validation (Error) for validation timing and error message - If the offline validation is passed and the device is connected to the internet, the validation is run against the online database. If the quantity exceeds the inventory remaining quantity or max per visit limit, show an error - If the device is not connected to the internet, the online validation is skipped - Refer to Sample Inventory Validation (Online Error) for validation timing and error message Warning Mode: Link to this flow chart <pre> graph LR A[Add Samples] --> B[Sign] B --> C[Check Remaining Qty (Offline)] C --> D{Exceed Qty?} D -- No --> E[Capture Signature] D -- Yes --> F[Warning Message] F -- Confirm --> E F -- Cancel --> B </pre> - The validation is run offline only and show the warning if the quantity exceeds the inventory remaining quantity or max per visit limit (Mobile) - Refer to Sample Limits Validation (Warning) for validation timing and error message
Log Sample Limits transactions and discrepancies	As a field sales rep, I must have all the sample limits transactions and	- When a sample or Direct to Practitioner sample subject to an applicable sample limit is signed or submitted (depending on the signature requirement level), a record is created in Provider Visit Sample Limit Transaction entity - When a sample limit is exceeded, a record is created in Provider Visit Sample Limit Discrepancy entity

Area	User Story	Acceptance Criteria
	discrepancies captured in the system, so that I can ensure compliance with regulatory requirements and maintain accurate records of sample disbursement.	○ A record is created when user proceeds with a warning ○ A record is NOT created when a user is blocked with an error and corrects the quantity before signing or submitting. However, it can get created in an error mode even if the quantity does not exceed the limit offline. For example, the quantity exceeds the limit on the server when the offline transactions are processed because the latest template was not downloaded or another sales rep also provided samples to the same HCP

Sample Limits Template and Test Patterns

Sample Limits Template	Rules	Sample Limits Popup Access	Fields in Sample Limits Popup	Validation Mode	Validation Test Patterns
Italy Class A	• New Products - For the first 18 months from the product launch date, 2 samples per visit and 8 samples per period per product per account • Mature Products - After 18 months, all products in Italy Class A share the limit - 4 shared samples per visit and 10 shared samples per calendar year per account. • Limits will reset every year.	• 3 dots menu at Samples or Direct to Practitioner title level for mature products • 3 dots menu at Sample or Direct to Practitioner sample product level for new products	• Allowed per Period: • Period Length: • Remaining Quantity: • Allowed per Visit: • Last Delivery Date (only if available)	Error	1. Template assigned to the sample product a. New Product b. Mature Product 2. Template assigned to the parent detail product (Sum of child product quantities cannot exceed limitation of parent product.) a. New Product b. Mature Product 3. Limits are reset by calendar year
Italy Class C	The same as Italy Class A	The same as Italy Class A	The same as Italy Class A	Error	The same as Italy Class A
Germany AMG	• 2 samples per calendar year per product per account.	• 3 dots menu at the parent detailed product level	• Allowed per Period: • Period Length: • Remaining Quantity: • Last Delivery Date (only if available)	Error	1. Template assigned to the sample product 2. Template assigned to the parent detail product (Sum of child product quantities cannot exceed limitation of parent product.)
Germany AMG + EPFIA	• 2 samples per calendar year per product per account with samples to be disbursed for only 24 months from first drop date	• 3 dots menu at the parent detailed product level	• Allowed per Period: • Period Length: • Remaining Quantity: • Last Delivery Date (only if available)	Error	1. Template assigned to the sample product a. Before 24 months from the 1st drop date b. After 24 months from the 1st drop date 2. Template assigned to the parent detail product (Sum of child product quantities cannot exceed limitation of parent product.)
Belgium	• 8 samples per calendar year per product per account	• 3 dots menu at the parent detailed product level	• Allowed per Period: • Period Length: • Remaining Quantity: • Last Delivery Date (only if available)	Error	1. Template assigned to the sample product 2. Template assigned to the parent detail product (Sum of child product quantities cannot exceed limitation of parent product.)

Area	User Story	Acceptance Criteria
Add Marketing Item	As a field sales rep, I must be able to capture marketing items in a visit, so that marketing items provided to accounts are tracked in the system	Marketing Item Sidebar (left side in SPA): • The Marketing Item sidebar displays all brand products in the field sales rep's territory that are parent products of marketing items aligned to that territory ◦ Parent 'Brand' or 'Brand-Indication' products in field sales rep's territory: ■ Display Name: LifeSciMarketableProduct.Name ■ Filtering Condition: • LifeSciMarketable.Type = 'Brand' or 'Brand-Indication' • LifeSciMarketable.Product = sample's LifeSciMarketableProduct.ParentBrandProduct • LifeSciMarketableProduct.ProductId = ProductTerritoryAvailability.ProductId AND • ProductTerrDtlAvailability.Purpose = 'Visit' AND Territory = field sales rep's territory • (ProductTerrDtlAvailability.AlignmentType = 'Inclusion' AND Territory = field sales rep's territory OR ProductTerrDtlAvailability.AlignmentType = 'Inclusion and Subordinates Inclusion' AND Territory = all the territories above the field sales rep's territory (i.e. Territory2.ParentTerritory2, it's parent... up to the top of the hierarchy)) • ProductTerrDtlAvailability.Status = 'Active' ◦ Do not show products excluded for field sales rep's territory: ◦ ProductTerritoryAvailability.AlignmentType = 'Territory Exclusion' AND Territory = field sales rep's territory • Show only active products (LifeSciMarketableProduct.IsActive = 'True') • Show only client products (LifeSciMarketableProduct.IsCompetitorProduct != 'True') • Show only valid products as of visit's Planned Start Time ◦ (the product's StartDate is null or StartDate <= Visit's Planned Start Time) AND ◦ (EndDate is null or Visit's Planned Start Time <= the product's EndDate) ◦ Marketing Items that are aligned to field sales rep's territory: ■ LifeSciMarketableProduct.Type = 'Product' AND ■ LifeSciMarketableProduct.ProductId = Product2.Id ■ Product2.SpecificationType = 'LSPromotionalItem' ■ LifeSciMarketableProduct.ProductSpecificationType = 'LSPromotionalItem' ■ LifeSciMarketableProduct.ProductId = ProductTerritoryAvailability.ProductId AND

Area	User Story	Acceptance Criteria
		■ ProductTerritoryAvailability.Purpose = 'Visit' AND ■ (ProductTerritoryAvailability.AlignmentType = 'Inclusion' AND Territory = field sales rep's territory OR ProductTerritoryAvailability.AlignmentType = 'Inclusion and Subordinates Inclusion' AND Territory = all the territories above the field sales rep's territory (i.e. Territory2.ParentTerritory2, it's parent... up to the top of the hierarchy) ■ ProductTerritoryAvailability.Status = 'Active' ■ Do not show products excluded for field sales rep's territory: ● ProductTerritoryAvailability.AlignmentType = 'Territory Exclusion' AND Territory = field sales rep's territory ■ Show only active products (LifeSciMarketableProduct.IsActive = True) ■ Show only client products (LifeSciMarketableProduct.IsCompetitorProduct != True) ■ Show only valid products as of visit's Planned Start Time ● (the product's StartDate is null or StartDate <= Visit's Planned Start Time) AND ● (EndDate is null or Visit's Planned Start Time <= the product's EndDate) • The parent brand products are displayed in the configured sort order: ○ If territory-level product sort orders are configured for field sales rep's territory, products are sorted by product territory sort order (ProductTerritoryAvailability.SortOrder). If territory-level product sort orders are not configured for field sales rep's territory, products are sorted by product's sort order (LifeSciMarketableProduct.SortOrder) ■ If the sort order is blank or the same, sort by alphabetical order ■ Products with the sort order populated are displayed higher than products with the empty sort order Product Restrictions: ○ If the parent detailing product is restricted at the account level for the primary account or attendees, field sales rep cannot select the product (the product is disabled with the lock mark button - Figma: PD.4b) so that field sales rep cannot add its child marketing items ○ If the parent detailing product is restricted at the account-territory level for the primary account or attendees and field sales rep's territory, field sales rep cannot select the product (the product is disabled with the lock mark button - Figma: PD.4b)) so that field sales rep cannot add its child marketing items ○ If both account level product restrictions and account-territory level restrictions are set for the same product, account level restrictions are applied ○ If Override Product Restrictions (HealthcareProvider.IsProdRstrcOverridden) flag is enabled for the account, the product restrictions are by-passed ○ If field sales rep clicks a restricted product in the sidebar menu, a warning message popover is displayed: ■ Title: Product Restrictions ■ Message: These accounts aren't eligible for {Product Name}: {Account Name1}, {Account Name2}. • When field sales rep clicks + button next to the product name, the button is changed to check mark button and the parent brand section is added within Marketing Items section on the right side of SPA below Product Discussions section Marketing Items Section (right side in SPA): • Marketing Items section is expandable/collapsible and expanded by default • Marketing Items section is displayed for HCOs based on "HCO Types Allowed for Samples and Items" setting in Admin Console - Visit Administration - Visit Settings: ○ If HCO's record type is selected in the setting, Direct to Practitioner section is displayed and enabled ○ If HCO's record type is not selected in the setting, Direct to Practitioner section is displayed and disabled • Under Direct to Practitioner section, the parent brand section is displayed. ○ The section's title is the product name ○ The parent brand section is expandable/collapsible and expanded by default

Area	User Story	Acceptance Criteria
		○ The configured fields from Provider Visit Marketing Item related list of applicable Visit page layout, including Item and Quantity are displayed ■ Item and Quantity fields are displayed and marked as required fields with red asterisk icon. Additional fields up to max 5 total (i.e. 3 additional fields) are displayed. ○ Item (picklist) ■ Show all the child Marketing Item products of the selected parent brand product ● Display Name: Product2.Name ● Filtering conditions: Marketing items that are aligned to field sales rep's territory ■ The items are sorted by product's sort order (LifeSciMarketableProduct.SortOrder) ● If the sort order is blank or the same, sort by alphabetical order ● Products with the sort order populated are displayed higher than products with the empty sort order ■ If only one item is available, auto-select it by default. Otherwise, the field is blank by default ■ The user can select an item from the picklist ■ The user can search an item by the name in the picklist (Search capability is required as there can be 50-100 items related to one brand) ○ Quantity ■ If the default quantity (LifeSciMarketableProduct.DefaultDistributionQuantity) is set, show the default quantity. Otherwise, the quantity field is blank by default ■ The user can edit the quantity using up/down arrow or direct input with keyboard (Note: Numpad in OCE is deprecated because we don't have equivalent component in LDS) ■ Make sure Quantity field has enough width to show 4 digits ○ When field sales rep click "+ Add Another" link at the bottom of the section, another row is added and field sales rep can enter another item related to the same brand ■ The user cannot select the same item as the already added item (the item is not available in the picklist) Deleting Marketing Items: ● The user can delete the items at the parent detailing product level from the left sidebar or the right section: ○ When field sales rep clicks check mark button next to the product name on the left sidebar or clicks 3 dots icon and select "Remove" from the menu in the sample section on the right side, a delete confirmation message is displayed: ■ Title: Remove product? ■ Body: Do you want to remove {product name} and its details from this visit? ■ Button: Cancel / Remove ○ After field sales rep confirms the message, the parent detailing product section within the right marketing item section is deleted and the button in the left sidebar is changed to + button. ○ When the parent detailing product section is deleted, all the child marketing items are deleted ● The user can delete a marketing item from the right section ○ When field sales rep clicks trash icon next to the item row, a delete confirmation message is displayed: ■ Title: Remove product? ■ Body: Do you want to remove {product name} and its details from this visit? ■ Button: Cancel / Remove ○ After field sales rep confirms the message, the marketing item row is deleted
Lock	As a field sales rep, I must not	● After a signature or Document ID is captured, indicate "Signature Captured" in the Marketing Item section on the right side

Area	User Story	Acceptance Criteria
Marketing Items on Sign	be able to edit marketing items for which HCP signs, so that I stay compliant	- After a signature or Document ID is captured, field sales rep cannot update some of the items depending on the product's Signature Requirement Level (LifeSciMarketableProduct.SignatureRequirementLevel): - Marketing Items with Signature Requirement Level = "Mandatory" - The user cannot add items (items are not displayed in the picklist) - The user cannot edit or delete the items , including quantity and additional configured fields (the fields are disabled) - If there is no item in Item picklist, the parent detail product is hidden in Items sidebar - Marketing Items with Signature Requirement Level = "Optional" - The user can add items (items are displayed in the picklist) - The user cannot edit or delete the items, including the quantity and additional configured fields (the fields are disabled) - Marketing Items with Signature Requirement Level = "Not Required" or blank - The user can add items - The user can edit or delete the items, including the quantity and additional configured fields
Save Visit	As a field sales rep, I must be able to save the marketing items captured in a visit, so that the items provided to the HCPs are tracked in the system	- When field sales rep saves the Visit SPA, - Provider Visit Marketing Item records are created/updated - When field sales rep signs or capture Document ID in the Visit SPA, - Provider Visit Marketing Item records are created/updated - When field sales rep submits the Visit SPA, - Provider Visit Marketing Item records are created/updated

Next Visit Objectives at Visit / Product Level

Next Visit Objectives at **Visit** Level:

- Figma: [Visit Objectives at Visit Level](#), [Visit Objectives](#)
- Product Spec: [Next Visit Objectives](#)
- Related Data Model: [Provider Visit](#)

Next Visit Objectives at **Product** Level:

- Figma: [Visit Objectives at Product Level](#), [Visit Objectives](#)
- Product Spec: [Next Visit Objectives by Product](#)
- Related Data Model:
 - [Provider Visit Product Detailing](#)
 - Next Visit Objectives picklist values: [Product Guidance](#)

Area	User Story	Acceptance Criteria
Enter Next Visit Objectives at Visit Level	As a field sales rep, I must be able to enter next visit objectives for my account, so that I get reminded when I schedule the next visit	- Next Visit Objectives section is available at the bottom of the Visit SPA if Admin configures Next Visit Objective section in Provider Visit page layout. - Text area (ProviderVisit.NextProviderVisitObjective) or picklist (ProviderVisit.NextPrvdVisitObjectiveType) is available at the bottom of the Visit SPA as configured in Provider Visit Page Layout by Administrator - If a text area is configured, field sales rep can enter max 4000 chars in the text area - If a picklist is configured, field sales rep can select one or more values (multi-select) from the picklist
Enter Next Visit Objectives at Product Level	As a field sales rep, I must be able to enter next visit objectives related to a product discussed for my account, so that I get reminded when I schedule the next visit	- Depending on Next Visit Product Objectives Fields Type setting in Admin Console - Visit Administration - Product Detailing Settings, Next Visit Objectives at Product Level is available: - If the setting = "None" (default value), "+ Add Next Visit Objective" link is not available - If the setting = "Picklist", "Text" or "Picklist and Text", "+ Add Next Visit Objective" link is available at the bottom of Detailing Product section - When field sales rep clicks the link, "Next Visit Objective" section is added below "Discussions" section "Next Visit Objective" section is expandable/collapsible and expanded by default - Inside "Next Visit Objective" section, - If the setting = "Picklist", "Next Visit Objective" section with "Next Visit Objective" picklist is displayed and required with a red asterisk icon - The picklist shows the list of next visit objectives for the product shared to the field sales rep or field sales rep's territory: - ProductGuidance.ProductReferenceRecord = the selected product - ProductGuidance.Type = 'Objective' - Show only active objective (IsActive = 'True') - Show only valid objectives as of visit's Planned Start Time (ProductGuidance.EffectiveStartDate is null or EffectiveStartDate <= Visit.PlannedVisitStartTime) AND (ProductGuidance.EffectiveEndDate is null or Visit.PlannedStartDateTime <= EffectiveEndDate) - The objectives are sorted by ProductGuidance.Priority ASC and then by ProductGuidance.ContentText in alphabetical order - If the setting = "Text", "Next Visit Objective" section with "Comments" text area field is displayed and required with a red asterisk icon - The user can enter max 1000 chars in the text area - If the setting = "Picklist and Text", "Next Visit Objective" section with both the picklist and text area fields are displayed and the picklist field is required with a red asterisk icon - The user can add maximum 3 next visit objectives for a product from "+ Add Next Visit Objective" link is available
Save next visit objectives	As a field sales rep, I must be able to save next visit objectives in the database, so that I get reminded when I schedule a next visit	- When field sales rep saves or submits the Visit SPA, the next visit objectives at Visit level are saved in ProviderVisit.NextProviderVisitObjective (for text) and/or ProviderVisit.NextPrvdVisitObjectiveType (for picklist) - When field sales rep saves or submits the Visit SPA, the next visit objectives at Product level are saved in ProviderVisitProductDetailing.NextPrvdVisitObjective field in JSON format
View Visit Objectives	As a field sales rep, I must be able to view the visit objectives entered in the previous visit, so that I get reminded of the objectives of my visit	- The user can view Next Visit Objectives at Visit Level and/or Product level entered in the previous visit (the visit submitted most recently by the same field sales rep for the same account) in Visit Objectives section in Visit SPA "Visit Objectives" section is below "Compliance Statement" section if enabled. Otherwise, it's displayed below Visit Information section in Visit SPA "Visit Objectives" section is expandable/collapsible and collapsed by default - If there are not Next Visit Objectives, the section is not displayed

Area	User Story	Acceptance Criteria
		- Visit Objectives at Visit Level is displayed under "General" - They are copied from either Text area (ProviderVisit.NextProviderVisitObjective) or picklist (ProviderVisit.NextPrvdVisitObjectiveType) of the previous visit to ProviderVisit.PreProviderVisitNotes field of the current visit when field sales rep creates a visit - Visit Objectives at Product Level is displayed under Product Name - One or more next visit objectives for a product is displayed - Next Visit Objective picklist value and/or texts are displayed - They are displayed directly from ProviderVisitProductDetailing.nextPrvdVisitObjective field of the previous visit - The objectives are displayed regardless of whether the product is added to the visit or not - Visit Objectives area not editable

Attendees

Attendees

Figma: [Attendees](#)

Product Spec: [Attendees](#)

Related Data Model:

- [Provider Visit](#)

Area	User Story	Acceptance Criteria
Edit Attendees	As a field sales rep, I must be able to add/remove attendees to a visit, so that I can record the accounts that attended a group visit	Attendees Sidebar (left side): - Attendees Sidebar is available in Visit SPA when the Attendees (Child Visit) related list is configured in Visit page layout - When Attendees Sidebar is expanded, - The following accounts (Account.name) are displayed by default: - Max 10 accounts (HCP/HCO) that are affiliated with the primary account are displayed under "Affiliation" (Note: The feature to showing accounts that work at the same address as the visit's place in OCE is dropped due to the data model change in LSC where we no longer have Address master) - Accounts are sorted by name alphabetically - When field sales rep updates the Account and/or Place of the visit, accounts in "Affiliation" are updated - When field sales rep clicks + button next to the account name, the button is changed to check mark button and it is added in Attendees section on the right side of SPA - Below the list of accounts, "Search All Attendees" button is displayed - When field sales rep clicks the button, Account Search popup is displayed - In Account Search popup, field sales rep can see all the accounts in their territory - OOTB Affiliated account list is available to filter the list by affiliated accounts - The user can search, multi-select accounts, and add them to the visit from Account Search

Area	User Story	Acceptance Criteria
		• Make sure search by accented characters works in Advanced Account Search (Mobile) • Make sure search by Kana (Phonetic Name) and Kanji name (Name) works for Japanese locale field sales reps in Advanced Account Search (Mobile) ■ When field sales rep adds accounts that are displayed by default in the sidebar, they get selected in the sidebar ■ When field sales rep adds accounts that aren't displayed by default in the sidebar, they are displayed first above the affiliated accounts. Product Restrictions: • If an account is restricted for the selected brand product at the account level, field sales rep can't select the account (the account is disabled with the lock mark button - Figma: PD.4b in the Attendees Sidebar and disabled in Account Search) • If an account is restricted for the selected brand product at the account-territory level, field sales rep can't select the account (the account is disabled with the lock mark button - Figma: PD.4b in the Attendees Sidebar and disabled in Account Search) • If both account level product restrictions and account-territory level restrictions are set for the same product, account level restrictions are applied • If a field sales rep clicks a restricted account in the Attendees Sidebar or Account Search, an error message: "This account isn't eligible for these products: {Product Name1} {Product Name2}." is displayed: Attendee Section (right side): • The added attendee's name is displayed • The attendee name is displayed as a link and field sales rep can use it to open Account Profile in a full-screen modal. ◦ The user can close the Account Profile modal and come back to Visit SPA • Under the attendee's name, Professional Title (HealthcareProvider.ProfessionalTitle) is displayed for the person accounts and Record Type name (Account__r.RecordType.Name) is displayed for business accounts • The attendees are displayed in alphabetical order by name • For each attendee, Actions button and trash icon are displayed. See Quick Actions - Attendees for attendee level actions • When the visit's channel is a Remote channel type (i.e. a configured channel is set in Remote Visit Channel setting in Admin Console - Remote Engagement), Invitation Email Address, Invitation Email Status and Bounced Reason if Invitation Email Status = 'Bounced' are displayed ◦ Invitation Email Address (ProviderVisit.InvitationEmailAddress) ◦ Invitation Email Status (ProviderVisit.InvitationEmailStatus) ◦ Invitation Email Bounced Reason (InvitationEmailBouncedRsn) Deleting Attendees: • The user can delete attendees from the Sidebar or from Attendee section on the right side: ◦ If a field sales rep clicks the check mark button in the sidebar or the trash button in the Attendees section, a delete confirmation message is displayed: ■ Title: Remove attendee? ■ Body: Do you want to remove {attendee name} from this visit? ■ Buttons: Cancel, Remove ◦ If field sales rep clicks Remove button, the attendee is deleted from the right Attendee section and the button for the attendee in the left sidebar is changed to + button. If the attendee wasn't displayed by default, it is removed from the sidebar • The user can't delete an attendee if a Signature/Document ID is already captured for the attendee ◦ The attendee is disabled in Attendee sidebar

Area	User Story	Acceptance Criteria
		○ The trash button is hidden for the attendee in Attendee section See Attendee Details for bulk-editing attendee's visit information See Attendee Visits for editing product discussions, samples, Direct to Practitioner and marketing items for attendees

Attendee Details (Out of 258 Scope)

Figma: [Attendees](#)

Product Spec: [Attendees](#)

Related Data Model: [ProviderVisit](#)

Area	User Story	Acceptance Criteria
Attendee Details	As a field sales rep, MSL or KAM user, I must be able to bulk-edit visit information for attendees, so that I can quickly capture the information for attendees	● "Attendee Details" link is available in the Attendees section of the Visit SPA only when "Show attendee details" setting is enabled. ● When the field sales rep clicks Attendee Details link, Attendee Details popup opens ● Attendee Details popup shows the attendees and the configured fields in a grid ○ 1st column shows the name of the attendees ■ Wrap attendee name if it does not fit within a column to show the entire name ■ Show attendees in alphabetical order by Name ○ Show fields from the Provider Visit related list of the Visit page layout: ■ IsConfirmed and custom fields with the following data types in ProviderVisit are supported ● Picklist ● Text ● Checkbox ● Date ● DateTime ■ If a record type is configured for Visit, show the fields from the page layout associated with the selected record type ■ Show fields that user has access to ■ Fields are editable as per the user's read/edit permission ■ The default value is as configured at DB level ■ Required fields at the DB level shows red asterisk mark in the title ● Show an error in case the value in a required field is empty ○ The grid is horizontally scrollable if configured columns do not fit within the grid width ● Done button closes the attendee details popup (the data is saved in memory until they are saved by Save/Sign/Submit buttons in Visit SPA) ● Cancel button discard the changes and closes the popup

Attendee Visit

Figma: [Actions - Primary Account](#), [Actions - Attendees](#)

Area	User Story	Acceptance Criteria
------	------------	---------------------

Record Attendee Visits	As a field sales rep, I must be able to capture visit details of an attendee in a group visit, so that each attendee's interaction is properly recorded for compliance and engagement tracking purposes	- Attendee Visit (Visit SPA for an attendee) is accessible from "Attendee Visit" quick action in the Attendee section of the parent visit's SPA Floating Actions (Mobile) / Account Actions (Web) - Floating actions / account actions aren't available Buttons - The same buttons as the parent visit are displayed at the top of the page - Delete, Launch Remote Engagement, and Submit buttons are always disabled - Cancel, Get Signature and Document ID buttons behave the same as the parent visit - refer to the test cases in Visit SPA - Buttons - Save button closes the attendee visit and navigates back to the parent visit - Schedule Next Visit button in the sidebar is not available Visit Information (on the right side) - Visit Information section is expanded by default - Visit Information section isn't editable - Visit Information section's layout is the same as the parent visit - Account field shows the account name, Professional Title (HealthcareProvider.ProfessionalTitle) is displayed for the person accounts and Record Type name (Account__r.RecordType.Name) is displayed for business accounts - Account name is a link that opens the account profile - Switch account link isn't available - If there are product restrictions for the attendee, show Product Restrictions link, which opens the Product Restrictions popover - Place shows the same address as the primary account from the attendee's contact point address when the attendee has the same address as the primary account. Otherwise, it's empty with "No address related to this account" text - If the license validations are enabled, show the license icons associated with the attendee's contact point address - Visit Objectives and Compliance Statements sections aren't available Sidebar (on the left side) - The following sidebar menus are displayed if configured in the Visit page layout related list - Product Discussions - Samples - Samples Sidebar is disabled if the attendee doesn't have the same address (including empty address) as the parent's visit's place to ensure only the HCPs working at the visit place receive the samples there. - Direct to Practitioner - Marketing Items - Recommendations, Presentations, and Attendees sidebar menus aren't available Product Discussion - The sidebar (on the left side) and the Product Detailing and Product Message sections (on the right side) work the same as the parent visit - refer to the test cases in Visit SPA - Product Detailing and Product Message + Add Discussion link isn't available + Add Next Visit Objective link isn't available Samples - The side bar (on the left side) and the Samples section (on the right side) work the same as the parent visit - refer to the test cases in Visit SPA - Samples.
------------------------	---	--

Area	User Story	Acceptance Criteria
		- Sample Inventory validation is applied to the attendee the same way as the primary account. See Samples - Product Inventory Popup/Validation - License validation is applied to the attendee the same way as the primary account. See License Validation for Samples - Sample Limits is applied to the attendee the same way as the primary account. See Sample Limits Direct to Practitioner - The side bar (on the left side) and the Direct to Practitioner section (on the right side) work the same as the parent visit - refer to the test cases in Visit SPA - Direct to Practitioner - Product Allocation validation is applied to the attendee the same way as the primary account. See Direct to Practitioner - Product Allocation Popup/Validation - License validation is applied to the attendee the same way as the primary account. See License Validation for Direct to Practitioner - Sample Limits is applied to the attendee the same way as the primary account. See Sample Limits Marketing Items - The side bar (on the left side) and the marketing items section (on the right side) work the same as the parent visit - refer to the test cases in Visit SPA - Marketing Items
Automatic entry of product discussion for attendees	As a field sales rep, I must have product details for attendees to be automatically inherited from the parent visit unless I manually update them, so that I can efficiently complete my visit engagement report	If attendee visits are not modified, product details, priority, share messages, and message reactions (i.e. ProviderVisitProductDetailing and ProviderVisitDetailingProductMessage records) are automatically copied from the parent visit when the parent visit is submitted in the backend on web

Custom Object

Figma: NA

Product Spec: NA

Related Data Model: NA (Custom object is an entity created by a customer that has a lookup to Visit to allow additional data capturing in Visit, which isn't supported by the standard features)

Area	User Story	Acceptance Criteria
Add Custom Object data in Visit	As a field sales rep or Medical Science Liaison (MSL), I must be able to capture additional information or activities in a visit, so that I meet my company's requirements and support accurate data analysis	Custom Object availability - If a custom object is added to the Visit page layout, the menu is displayed on the left sidebar as per the Visit page layout configuration - Max 10 related lists are supported and displayed in the sidebar in Visit SPA. If all the 8 OOTB related lists below are configured, max two additional custom objects are displayed as per the page layout configuration. - Presentation Forum (Presentations) - Provider Visit Product Detailing (Product Discussion)

Area	User Story	Acceptance Criteria
		■ Provider Visit Detailing Product Message (part of Product Discussion) ■ Provider Visit Product Discussion (part of Product Discussion) ■ Product Disbursement (Samples) ■ Provider Visit Requested Sample (Direct to Practitioner) ■ Provider Visit Marketing Item (Marketing Items) ■ Provider Visit (Attendees) ○ The sidebar menu: Custom object's related list label Add a new record ● If no record type is configured for the custom object by the administrator ○ When the user expands a custom object sidebar menu and clicks "+ Add" button, a new section is added to the right section ■ The section title: the custom object's related list label ■ The fields are displayed from the Custom Object related list of the corresponding Visit page layout (for example if a record type is configured for a visit, the page layout assigned to the selected visit record type) ■ The fields are displayed in a 2-column layout except Text Area or Long Text Area field (even if the page layout is configured as a 1-column layout). A Text Area or Long Text Area field is displayed on its own separate row ● If record types are configured for the custom object by the administrator ○ When the user expands a custom object sidebar menu and clicks "New" button, the record type labels are displayed in the popover. When the user selects one of the record types, a new section is added to the right section ■ The section title: the object's label + "-" + the selected record type label ■ The fields are displayed from the Custom Object page layout assigned to the selected record type ■ The fields are displayed in a 2-column layout except Text Area or Long Text Area field (even if the page layout is configured as a 1-column layout). A Text Area or Long Text Area field is displayed on its own separate row ● The section is expanded by default and collapsible ● The user can add more than one record from + Add More link Edit/delete the record ● The user can edit or delete the record in the planned visit, and can't edit the record in the submitted visit ● The user can delete the record from the right section using the trash button

Signature Capture

Figma: [Signature](#)

Product Spec: [Signature Capture](#)

Data Model:

- Digital Signature - Signature and timestamp captured in a visit
- Provider Visit Detailing Product - Detailed products in a visit
- Product Disbursement - Disbursed samples in a visit
- Provider Visit Requested Sample - Direct to Practitioner samples captured in a visit
- Provider Visit Marketing Item - Marketing items captured in a visit

Area	User Story	Acceptance Criteria
Signature Capture (Mobile only)	As an field sales rep, I must be able to capture a signature for the primary account or an attendee when I provide product information or products that require a signature so that I am compliant with the country/company compliance rules	Signature Page Header - Title: "Add Signature" and a text "For compliance purposes, device authentication is required." are displayed (Figma SI.3) - Cancel and Accept buttons are available - Cancel button closes the popup without saving the signature and the user is navigated back to the Visit page after the authentication via Pin Code, Touch ID or Face ID - Accept button saves the signature and closes the popup and user is navigated back to the Visit page after the authentication via Pin Code, Touch ID or Face ID - If the signature is not valid, show an error message: "Enter a valid signature". - If the signature is valid, a signature and signed date are saved in DigitalSignature entity - Refer to xxx for geolocation capture on signing. - Accept button is disabled until a signature is entered Signature Header - The following fields are displayed: - Hard-coded fields: - Account Name + "(" + Professional Title (HealthcareProvider.ProfessionalTitle) + ")" - If the Professional Title is blank, do not show "(" - Place in a format according to Admin Console - Address Administration - Date (Signed Date) - Configurable fields: - Fields from Provider Visit's field set: "Visit Signature Fields" - Default fields in the field set: Shipping Address - Make sure Sales Rep (Created By > Name) name can be configured and displayed - Fields from Business License field set - Default fields in the field set: License Number and Period End (Expiration Date) - Show the license information for the enabled licenses (State, SDL and/or DEA) in Admin Console - License Administration - If samples are captured, show the license information associated to the visit's place - If Direct to Practitioner samples are captured (i.e. shipping address it not blank), show the license information associated to the shipping address - Prepend field labels with a prefix "Shipping Address" in case Direct to Practitioner samples are captured and the label for the type of license (default labels are "State", "SDL" or "DEA") Pattern: Label: "Shipping Address" (translatable label) if Direct to Practitioner samples are captured + {Label for the type of license} + {field label} Examples: - License Information associated with the visit's place: - The label for the state license number: State License Number - The label for the state license expiration date: State Period End - The label for the SDL license number: SDL License Number - The label for the DEA license number: DEA License Number - License information associated with the shipping address: - The label for the state license number: Shipping Address State License Number - The label for the state license expiration date: Shipping Address State Period End - If there are multiple valid state licenses for the same account, the license with the most recent Period End is used

Area	User Story	Acceptance Criteria
		■ Display 4 fields per row. If the field size is too big, it should wrap. ■ Any fields having null/empty values or no read permission are skipped and not displayed • “Request Copy” checkbox is displayed at the top left and editable if “Show request receipt on signature page” setting in Admin Console - Visit Administration - Visit Settings is enabled (If this checkbox is checked, IsSignatureCopyRequested flag in DigitalSignature entity is updated, so that customers can build a logic to send a copy via email based on this flag. There is no OOTB logic) Switch link (Out of 258 scope) • Switch account link is available to change the account (signee) of the signature page • Switch account link is hidden in the following cases: ○ Visit's channel is a remote channel ○ There are no accounts that belong to current visit's address ○ Detailing products that require signature are added in the signature page • When a user clicks on Switch link, Account Search popup opens and show the accounts that belong to the current visit's address • The following accounts are filtered out in the Account Search ○ If Direct to Practitioner samples are added, the accounts that do not have the selected shipping address ○ If State, SDL and/or DEA license validations are enabled, ■ Accounts that don't have valid licenses at the visit's place if samples are added to the signature page ■ Accounts that don't have valid licenses at the shipping address if Direct to Practitioner samples are added to the signature page ○ Accounts that are added as attendees of the visit ○ Accounts whose record type do not have access to the currently selected visit's record type ○ Accounts that have product restrictions and restricted products are added in the signature page ○ Accounts that have sample limits and the remaining quantity in the offline database for samples or Direct to Practitioner samples added in the signature page is 0 • If all accounts are filtered out then the Switch button is hidden. Activity Table • Activity Table shows all the activity and product details for which a signature needs to be captured in the below order: ○ Product Discussions shows: ■ Activity: "Product Discussion" (translatable label) ■ Product: On label Brand / Indication / Brand Indication / Therapeutic Area ■ Details: Provider Visit Detailing Product field set + Life Science Marketable Product field set • Default fields in the field set: ○ Provider Visit Detailing Product field set: Detailing Product Name ○ Life Science Marketable Product field set: Manufacturer (In the case of detailing product, this field is expected to be null and not displayed) ○ Samples shows: ■ Activity: "Sample" (translatable label) ■ Product: Parent Brand / Brand Indication Product name ■ Details: Product Disbursement field set + Life Science Marketable Product field set • Default fields in the field set: ○ Product Disbursement field set: Sample Product Name (which includes strength and form), Batch Number (Product Disbursement > Production Batch ID > Unique Identification Number) and Quantity

Area	User Story	Acceptance Criteria
		■ Make sure Expiration Date (Production Batch ID > Expiration Date) can be additionally configured and displayed ○ Life Science Marketable Product field set: Manufacturer ○ Direct to Practitioner shows: ■ Activity: "Direct to Practitioner" (translatable label) ■ Product: Parent Brand / Brand Indication Product name ■ Details: Provider Visit Requested Sample field set + Life Science Marketable Product field set ● Default fields in the field set: ○ Direct to Practitioner field set: Sample Product Name (which includes strength and form) and Quantity ○ Life Science Marketable Product field set: Manufacturer ○ Marketing Items shows: ■ Activity: "Marketing Item" (translatable label) ■ Product: Parent Brand / Brand Indication Product name ■ Details: Provider Visit Marketing item field set + Life Science Marketable Product field set ● Default fields in the field set: ○ Marketing Item field set: Marketing Item Name and Quantity ○ Life Science Marketable Product field set: Manufacturer ● Any fields having null/empty values or no write/read permission are not displayed ● Max 5 fields are supported Disclaimer ● Disclaimer texts are displayed from Compliance Statement Definition records shared to the user: ○ Displayed statements: StatementText ○ Filtering Condition: ■ ModuleType = 'Visit' ■ StatementType = 'Disclaimer' ○ If multiple statements are shared, they are sorted by DisplayOrder ● Make sure the statements are left-aligned and properly indented in case multiple statements are displayed ● If the disclaimer texts are long, signature screen scrolls so that the entire disclaimer texts are displayed Signature Area ● Signature Area shows the company logo if the "SignatureAreaLogo" static resource is available and active "SignatureAreaLogo" UI Schema record is assigned to the user's profile ● A HCP can sign in the signature area ● "X Clear" link clears the signature
Save Signature	As a field sales rep, I must be able to capture a signature for the primary account or an attendee in the database when I provide product information or products that require a signature so that I	● Signature and related information are stored in Digital Signature entity ○ Signature: Signature ○ Signature Date: SignedDate ○ "Request Copy" checkbox: IsSignatureCopyRequested ○ Geolocation if the setting is enabled. Refer to Geolocation Capture on Signing

Area	User Story	Acceptance Criteria
	can ensure compliance with regulatory requirements and have verifiable proof of interaction for auditing and reporting purposes	
Signature Snapshot (Out of 258 scope)	As a field sales rep, I must be able to capture or review the snapshot of the signature page so that I can confirm the HCP's acknowledgement and accurate recording of the signature for compliance and audit readiness	• If "Capture signature page snapshot" setting in Admin Console - Visit Administration - Visit Settings is enabled, the snapshot of the signature page is saved as an attachment to the visit record upon Accept of the signature • The snapshot captures the image of the entire signature page including the scrolled area • Any user who has access to the visit record can open the image to review the snapshot from Files related list of the visit record page

Geolocation Capture

Figma: N/A

Product Spec: [Geolocation Capture](#)

Related Data Model:

- [Digital Signature](#) - geolocation capture on signing
- [ProviderVisit](#) - geolocation capture on submit

Area	User Story	Acceptance Criteria
Geolocation Capture on Signing and Submit (Mobile only)	As a field sales rep, geolocation data must be captured when I obtain an HCP's signature and/or I submit a visit so that my company can track where the interaction took place for compliance and reporting purposes	• Geolocation capture is enabled based on the settings in Admin Console - Visit Administration - Visit Settings: ◦ "Capture geolocation on signing" setting ■ If the setting is disabled, geolocation (longitude and latitude) is not captured upon Accept of the signature in the database ■ If the setting is enabled, geolocation (longitude and latitude) is captured upon Accept of the signature for the primary account or an attendee in the database (DigitalSignature.GeolocationTimestamp) ■ If GPS is off when the user clicks "Get Signature" button for the primary account or an attendee, a warning message is displayed • Title: GPS is currently disabled... • Message: To use GPS, enable it in your system settings before confirming. Otherwise, you can confirm without GPS. • Button: Cancel / Settings / Confirm ◦ If the user selects Settings, iOS Settings page is displayed. ◦ The user can come back to LSC app with the link at the top left in the iOS Settings page ◦ If the user selects Confirm and proceeds with the warning, the signature page is displayed

Area	User Story	Acceptance Criteria
		■ If the distance between the user's device and visit's location is longer than the distance configured in "Maximum Allowed Distance of Visit in Meters" setting in Admin Console - Visit Administration - Visit Settings when the user clicks "Get Signature" button, a warning message is displayed ● Title: GPS location is outside the allowed range... ● Message: Move closer to the visit address before confirming, or confirm with your current GPS location. ● Button: Cancel / Confirm ■ If the user selects Confirm and proceeds with the warning, the signature page is displayed ■ Signed Away From Allowed Distance field (ProviderVisit.IsSignedAwayFrmAllowDstn) is set to true ■ If a geolocation cannot be captured, one of the below geolocation missing reasons is automatically logged in the database (DigitalSignature.GeolocationMissingReason): ● "Offline" - when device can't capture GPS signal ● "User restricted" - when GPS functionality is disabled for application ● "Device restricted" - when GPS functionality is disabled on device ● "Bad Data" - when the device or an iOS (API) System fails to capture correct geolocation coordinates; both latitude and longitude ○ "Capture geolocation on submit" setting ■ If the setting is disabled, geolocation (longitude and latitude) is not captured upon Submit of the visit in the database ■ If the setting is enabled, geolocation (longitude and latitude) is captured upon Submit of the visit in the database (ProviderVisit.GeolocOnSubmit) ■ If GPS is off when the user clicks "Submit" button, a warning message is displayed ● Title:GPS is currently disabled... ● Message: To use GPS, enable it in your system settings before confirming. Otherwise, you can confirm without GPS. ● Button: Cancel / Settings / Confirm ○ If the user selects Go to Settings, iOS Settings page is displayed. ○ The user can come back to LSC app with the link at the top left in the iOS Settings page ○ If the user selects Confirm and proceeds with the warning, the signature page is displayed ■ If the distance between the user's device and visit's location is longer than the distance configured in "Maximum Allowed Distance of Visit in Meters" setting in Admin Console - Visit Administration - Visit Settings when the user clicks "Submit" button, a warning message is displayed ● Title: GPS location is outside the allowed range... ● Message: Move closer to the visit address before confirming, or confirm with your current GPS location. ● Button: Cancel / Confirm ■ If the user selects Confirm and proceeds with the warning, the visit is submitted ■ Submit Away From Allowed Distance field (ProviderVisit.IsSubmitAwayFrmAllowDstn) is set to true ■ If a geolocation cannot be captured, one of the below geolocation missing reasons is logged in the database (ProviderVisit.SubmitGeolocMissingReason): ● "Offline" - when device can't capture GPS signal ● "User restricted" - when GPS functionality is disabled for application ● "Device restricted" - when GPS functionality is disabled on device

Area	User Story	Acceptance Criteria
		"Bad Data" - when the device or an iOS (API) System fails to capture correct geolocation coordinates; both latitude and longitude

Delay Reason on Submit

Figma: Delay Reason on Submit
Product Spec: [Delay Reason on Submit](#)
Related Data Model:

- [Provider Visit](#)

Area	User Story	Acceptance Criteria
Enter Delay Reason on Submit	As a field sale rep or Medical Science Liaison (MSL), I must be able to enter or select a delay reason if I submit a visit past due date, so that the reason for the delay is properly documented for internal tracking and auditing.	- Delay Reason on Submit feature is controlled by "Submission Delay Reason Fields" setting in Admin Console - Visit Administration - Visit Settings: - If the setting is "None" (disabled), the user can submit a visit in past days with no limit - If the setting is "Text" and the date of the visit planned datetime is older than current datetime - configured number of days in "Delay Reason Threshold in Days" setting in Admin Console - Visit Administration - Visit Settings, the user is required to enter a reason in a text field when he/she submits a visit - The entered reason is saved in ProviderVisit.SubmitDelayReason - If the setting is "Picklist" and the date of the visit planned datetime is older than current datetime in days - in "Delay Reason Threshold in Days" setting in Admin Console - Visit Administration - Visit Settings, the user is required to select a delay reason from the picklist when he/she submits a visit - The entered delay reason is saved in ProviderVisit.SubmitDelayReasonType

Validations

User Story:
As a Sales Rep, Medical Science Liaison (MSL) or Key Account Manager (KAM), the visit details must be validated when I **save, sign (or enter Document ID) or submit** the visit, so that the data I input are valid and compliant

#	Persona	Validation	Activation	Error/Warning Condition	Applied Area	Validation Mode	Message	Validation Timing

Visit Snapshot / Denormalization

Figma: N/A

Product Spec: [Visit Snapshot](#)

Related Data Model: [Provider Visit](#)

Area	User Story	Acceptance Criteria
Visit Snapshot	As a field sales rep or Medical Science Liaison (MSL), I must have the snapshot of visit and visit-related data be captured when I sign/enter document Id or submit a visit for the visit, so that the information at the time of signature or submit is preserved for compliance/auditing purpose	Snapshot of fields in the visit and visit related entities mentioned in the table are captured for the parent visit and child visits.

Visit Sharing

Figma: N/A

Product Spec: [Visit Sharing](#)

Related Data Model: [Visit](#), [Provider Visit](#)

Activation: Trigger Handler: "VisitChangedEventShareHandler" and Job: Visit Share Management Jobs

Area	User Story	Acceptance Criteria
Visit Sharing	As a field sales rep and Medical Science Liaison (MSL), I must be able to view the header of the visits created by other users for the accounts in my territory, so that I have visibility on the visits done by other users and plan my visits accordingly	- If "VisitChangdEventShareHandler" trigger handler is enabled by Administrator, the user can view the Visit Information of the visits created by other users for accounts in the user's territory - When the user is assigned to a new territory, the visit in the past for the accounts in the new territory are also visible - Make sure the visits are displayed in Account Profile - Activity History and Visit List View - Make sure the visits are displayed in Planner if "Display Colleague Visits on Planner Background" setting is enabled

Visit Record Page

Visitors

Figma: N/A

Product Spec: [Employees](#)

Related Data Model:

- [Visitor](#)

Area	User Story	Acceptance Criteria
Visitors (Employees)	As a field sales rep, I must be able to add my manager or colleagues who attends the visit, so that I can log who else from our company joins the visit as well as the scheduled visit is shared to them	• The field sales rep user can add visitors from the Visit record page with "Edit Visitors" button • "Edit Visitors" button launches the Visitor Search (Web) or Advanced Visitor Search (Mobile). ◦ Only the users with profiles specified in "User Profiles Available in Visitor Search" setting in Admin Console - Visit Administration - Visit Settings are available in Visitor Search • The search result shows the list of columns including Name field configured by the Administrator and the user can search by them (Mobile only) ◦ The field sales rep user's manager is always displayed at the top and indicated as "Manager" ◦ If the field sales rep user does not have access to the configured columns, show an error: "Please contact system administrator" • The field sales rep user can add/delete visitors in a planned visit • The field sales rep user cannot add/delete employees in a submitted visit

Expenses

Figma: NA

Product Spec: [Expenses](#)

Related Data Model:

- [Expenses](#) - Expenses captured in a visit
- [Expense Type](#) - Expense type master
- [Expense Participant](#) - Allocation of expenses to attendees

Area	User Story	Acceptance Criteria
Add Expenses	As a field sale rep or medical science liaison (MSL), I must be able to record expenses associated with a visit and how much is spent per account, so that I can report my expenses to my company	Add Expense and Receipt: • The user can add expenses with "New Expense" button from Expenses tab in Visit record page • (Mobile) "New Expense" shows "Expense Only" and "Expense and Receipt" menus ◦ "Expense Only" opens "Add Expense" popup ◦ "Expense and Receipt" opens iOS camera and the user can take a picture of the receipt or choose a picture of the receipt from the photo library ◦ After the receipt is selected, "Add Expense" popup opens • "Add Expense" button opens a popup where the user can enter Expense Type, Currency, Amount and Description. ◦ Expense Type: Required and should show only the expense types available for Visit and effective as of the visit's Planned Start Time

Area	User Story	Acceptance Criteria
		■ Displayed Value: ExpenseType.Name ■ Filtering Condition: ExpenseType.ExpenseAvailabilityType = 'Visit' ■ (ExpenseType.EffectiveStartDate is null or EffectiveStartDate <= Visit.PlannedStartDateTime) AND (ExpenseType.EffectiveEndDate is null or Visit.PlannedStartDateTime <= EffectiveEndDate) ■ Sort Order: ExpenseType.Name ○ Currency: Required and the picklist shows the configured currencies in the org and the user's default currency is selected by default ○ Amount: Required and respects the currency format of the selected currency ○ Description: Optional text area ○ The popup has Cancel / Save buttons ■ Save button saves the expense, closes the popup and adds it to the visit ● If the expense and receipt are captured, the receipt is saved as attachments in Files ● The receipt file is auto-named - the naming rule is "Visit Name-Expense Type-DateTime" ■ Cancel button closes the popup without saving the expense ● (Web) The user can add receipts from the record menu - Files View/Edit Expense: ● The user can view the added expense in the Expense list (custom component) ○ The list shows fields from lsc4ce_RelatedList by default, which includes Expense Type, Currency, Amount and Description ○ The total amount in the user's currency is displayed at the bottom of the list ○ The user can sort the list by click/tap the column header. The sort order toggles between ascending and descending. ● The user can view/edit the added expense from the record menu - "View/Edit" from the Expense list (custom component) in the Visit record page ○ The menu opens Edit Expense popup in a planned visit and the user can edit Expense Type, Currency, Amount and Comments. ■ Save button saves the updated expense and closes the popup ■ Cancel button closes the popup without saving the updated expense ○ The menu opens Expense Detail popup in a submitted visit in a view only mode with only Cancel button (i.e. Expenses are not editable in a submitted visit) View Receipt: ● The user can view the attached receipts from the record menu - "View Receipts" Delete Expense: ● The user can delete the expense from the record menu - "Delete" ● After the confirmation message, an expense is deleted ○ Title: Delete expense? ○ Body: Do you want to delete this expense from this visit? ○ Buttons: Cancel / Delete ● If the expense is allocated to accounts, the allocation records (Expense Participant) are also deleted

Area	User Story	Acceptance Criteria
		• "Delete" menu is not available for a submitted visit Lock on Submit: • The expense can be edited/deleted for a planned visit • The expense cannot be edited/deleted for a submitted visit
Allocate Expenses	As a field sale rep or medical science liaison (MSL), I must be able to allocate expenses to accounts in a visit, so that I can ensure accurate and compliant reporting of transfers of values to healthcare practitioners	• The user can allocate expenses to the primary account and attendees of the group visit from 3 dots menu - "Allocate" • "Allocate" button opens "Allocate Expense" popup ◦ The popup shows the expense type at the top and a table with Accounts and Amount fields ◦ The user can enter the allocated amount per account (including the primary account) in Amount field ◦ At the bottom of the popup shows Expense Amount on the left, Allocated Amount on the right and Expense Amount - Allocated Amount in the middle to help with the calculation ◦ Save button saves the expense allocation and closes the popup ■ If the Total allocated amount exceeds the expense amount, show an error: "Adjust the allocated amount so it's less than the total amount." ◦ Cancel button closes the popup without saving the expense allocation

Attachments (Files) - (Ready for PM Review)

Figma: N/A

Product Spec:

Related Data Model: Salesforce standard Files

Area	User Story	Acceptance Criteria
Add Attachments	As field sales rep user or Medical science liaison (MSL), I must be able to add attachments to a visit so that I can capture relevant documents to the visit	• The end user can add one or more attachments to a visit from Files related list of the Visit record page • (Mobile) End user can either take a photo or select a photo/file from the photo library and attach it to the visit • (Mobile) the end user adds one or more attachments, "Has Attachments" flag (ProviderVisit.HasAttachments) is updated to True • The user can view added attachments in the visit • The user can delete the attachments in a planned visit • The user cannot delete attachments in a submitted visit • Max size allowed for attachments follow the standard mobile app max limit (if any) and salesforce max Files size limit.

Ratings (Ready for PM Review)

Figma: N/A

Product Spec: [Visit - Ratings](#) / [Account - Ratings](#)

[Ratings Acceptance Criteria](#)

Related Data Model:

- General ratings: Account
- Product ratings: Provider Account Product Information
- Territory ratings: Provider Account Territory Information
- Team ratings: Account User Group Info
- Address ratings: Contact Point Address

Area	User Story	Acceptance Criteria
View/Edit Ratings in Visit	As a field sales rep or Medical Science Liaison (MSL), I must be able to view/edit ratings in a visit so that I can quickly view/update ratings of my account as a result of the visit	• The user can access Ratings tab in the Visit record page • The user can view/edit the ratings for the primary account in the parent visit and the ratings for the attendee of the visit in the attendee visit (child visit) • The Ratings tab layout in the Visit record page is exactly the same as the Ratings tab in the Account Profile • The user can view/update the the following ratings in a planned/submitted visit as per his/her ratings permission: ◦ General ratings - Account based rating ◦ Product ratings - Account & Product based ratings ◦ Territory ratings - Account & Territory based ratings ◦ Team ratings - Account & Team based ratings ◦ Address ratings - Account address based ratings • If the primary account is outside of the user territory, an error message "User does not have access to Account, or it does not exist." (the same behavior as the ratings in the Account Profile)

Surveys (Ready for PM Review)

Figma: N/A

Product Spec: [Surveys Product Spec](#),

Related Data Model: Salesforce standard Survey data model - [Survey Invitation](#)

Note: Survey entry screen is the re-used component. Refer to [Surveys Product Spec](#) and [Survey Acceptance Criteria](#) for the more detail test cases. This AC covers only the entry point to the Survey component.

Area	User Story	Acceptance Criteria
Surveys	As a field sales rep or Medical Science Liaison (MSL), I must be able to complete a survey directly from a visit, so that I can accurately capture the account feedback and insights gathered during my interaction	Access Surveys • The user can access Surveys from: ◦ Survey quick action (floating action) for the primary account - See Quick Action in Visit SPA ◦ Survey attendee action for the attendees - See Quick Action in Visit SPA ◦ Survey list in Visit record page • The following survey invitations are displayed in the survey list ◦ Survey invitation linked to one or more products - If the user is aligned to the product, the survey is available for any account in Visit

Area	User Story	Acceptance Criteria
		■ Filtering Condition: SurveyInvitation.Id = SurveySubject.ParendId ■ SurveySubject.SubjectId = LifeSciMarketableProduct.Id ■ LifeSciMarketableProduct.ProductId = ProductTerritoryAvailability.ProductId AND ■ ProductTerritoryAvailability.Purpose = 'Visit' AND ■ (ProductTerritoryAvailability.AlignmentType = 'Inclusion' AND Territory = field sales rep's territory OR ProductTerritoryAvailability.AlignmentType = 'Inclusion and Subordinates Inclusion' AND Territory = all the territories above the field sales rep's territory (i.e. Territory2.ParentTerritory2, it's parent... up to the top of the hierarchy) ■ ProductTerritoryAvailability.Status = 'Active' ○ Survey invitation linked to a territory - If the survey invitation is available for the user's territory, the survey is available for any account in Visit ■ Filtering Condition: SurveyInvitation.Id = SurveySubject.ParendId ■ SurveySubject.SubjectId = Territory.Id ■ Territory.Id = use's territory ○ Surveys invitation linked to an account - If the survey invitation is available for the visit's account or the attendee, the survey is available in Visit ■ Filtering Condition: SurveyInvitation.Id = SurveySubject.ParendId ■ SurveySubject.SubjectId = Account.Id ■ Account.Id = Visit.AccountId • The user can fill in a survey from "Launch" button (mobile) or the survey name link (web) in the survey list - Open tab • The user can fill in a survey in a planned and submitted visit

Assessment Tasks (Ready for PM Review)

Figma: N/A

Product Spec: Refer to [KAM Product Spec](#)

Related Data Model: Assessment Task

Persona: Key Account Manager (KAM)

Area	User Story	Acceptance Criteria
Update Assessment Tasks	As a Key Account Manager (KAM), I must be able update the status of assessment tasks linked to the action plan for my accounts as a result of my visit, so that the latest progress is captured, enabling better coordination with internal teams and ensuring timely follow-up on strategic initiatives	• The user can access the list of open assessment tasks that are associated with the primary account of the visit and assigned to the user in the visit record page ○ Generic Related List filtering criteria: ■ AssessmentTask.Status != 'Completed ■ AND AssessmentTask.AssignedTo = CurrentUser ■ AND AssessmentTask.ReferenceRecord.Type IN ('ActionPlan') ■ AND AssessmentTask.PartyReferenceRecordId IN (Select AccountId from Visit where Id = 'CurrentVisitId') • When the user updates the status, ○ The in progress message toast: "Updating the status of "(Assessmsent Task Name)"..." is displayed while updating the status ○ the success toast message: """(Assessment Task Name)" was marked as completed and linked to the current visit." is displayed and Visit Id is populated in the completed assessment task

Area	User Story	Acceptance Criteria
		Note: In the scope of 258, Generic Related List is leveraged to support this use case. Once the user updates the status of an assessment task, the record disappears from the list due to the filtering criteria. A separate standard related list can be added to the Visit record page to view the completed assessment task in the visit if necessary.

Unlock Submitted Visit (Ready for PM Review)

Figma: N/A

Product Spec: [Unlock Submitted Visit](#)

Related Data Model:

- [Visit](#)

Area	User Story	Acceptance Criteria
Unlock submitted visit (Web only)	As an administrator, field sales rep or Medical Science Liaison (MSL), I must be able to unlock a submitted visit, so that mistakes or missed details can be updated when necessary to ensure accurate visit reporting	• If "Unlock submitted visit" setting in Admin Console - Visit Administration - Visit Settings is enabled for the user's profile/user, "Unlock" button is displayed in Visit record page on web. • "Unlock" button should be displayed only for a submitted visit. In case of a group visit, it should be displayed only for a parent visit Note: The visibility of the button (Visit.Status = 'Submitted' AND Visit.ParentVisitId = Empty) needs to be configured by the administrator in the visit record page configuration • When the user clicks on "Unlock" button for a submitted visit, the system checks if the visit can be unlocked. ◦ If the visit can be unlocked, the visit's status is updated to "Planned" and a success toast is displayed ◦ In case of a group visit, the visit's status of the parent visit and attendee visits are updated to "Planned" ■ The user can edit the visit and submit it again ■ If a signature is captured for the visit, the fields and sections locked upon Sign/Document ID are not editable. For details on locked fields and sections, refer to: • Visit Information for locked header fields • Product Detailing for locked product sections • Samples for locked samples • Direct to Practitioner for locked DTP samples • Marketing Item for locked marketing items ■ Activity Plan will be updated accordingly when the calculation job is run ■ If the visit has samples that do not require a signature and sample limits are applied, the sample limits remaining quantities are updated ■ If the visit has samples that do not require a signature and sample inventories are managed in LSC, the sample inventory remaining quantities are updated ◦ If the visit cannot be unlocked due to one or more of the following reasons, an error message is displayed. ■ The visit has related reconciled sample transactions (If ProductDisbursement.InventoryCountReference is populated, it is reconciled - i.e. considered in an inventory count) • Error Message: "We couldn't unlock this visit because it has reconciled sample disbursements. Ask your Salesforce admin for help." ■ The visit has samples with pending sync transactions on Product Batch Item (ProductBatchItem) and/or Provider Visit

Area	User Story	Acceptance Criteria
		Sample Limit Transaction (PrvdVstSampLmtTransaction) • Error Message: "We couldn't perform the action because there are unprocessed sync transactions. Try again later or ask your Salesforce admin for help." ■ The following jobs are running: • AccountMergeBatch • SampleLimitsDeleteJob • SampleLimitFactory • SampleLimitProductUpdate • SampleLimitInitialization ◦ Error Message: "We couldn't perform the action because there are uncompleted jobs. Try again later or ask your Salesforce admin for help." ■ The user unlocks the attendee's visit record: • Error message: "Attendee visits can't be unlocked directly. Unlock the parent visit to unlock this attendee visit."

Visit Configuration

Configuration Changes

Translation (Custom Labels, Object and Field Labels)	Yes	Yes	No	Yes
Data Setup (Master Data)	No	No	No	No

Admin Console - Visit Administration

Notes: Metadata needs to be updated to reflect the changes in Visit SPA in both web and mobile

Area	User Story	Acceptance Criteria
Admin Console - Visit Administration	As an administrator, I must be able to manage settings related to Visit Management, so that Visit Management features support my company's business processes and ensure compliance with relevant	Visit Administration Menus - The following menus are displayed in this order in Admin Console - Visit Administration page - Visit Settings - Visit Record Type Mappings - Product Discussion Settings - Scheduled Jobs Notes: Signature Area Logo menu is removed as the page does not add any value than being able to preview the logo image

Area	User Story	Acceptance Criteria
	market regulations	uploaded as a static resource. The preview is visible in the static resource page. Visit Settings - The settings are available as per Visit Settings table - Visit Settings are displayed in 2-column layout - The user can create Org / Profile / User level settings Visit Record Type Mappings - The administrator can view a list of visit record type mappings The list is sorted by Account Record Type name -> Sort Order by default The user can sort the list by any column and descending/ascending order switches every time user clicks on the column header - The administrator can create a account record type and visit record type mapping records - The user can click on New button to create a mapping record - Name, Account Record Type, Visit Record Type and Sort Order fields are displayed in the New popup - The user can type in the Name of the mapping record - The name must be unique. If the name already exists, show an error message: "A mapping with that name already exists. Enter a different name." - All the account record types defined in the org are displayed in Account Record Type picklist and the user can select one - All the Visit record types defined in the org are displayed in Visit Record Type picklist and the user can select one The user can enter the sort order The administrator can edit the sort order of the mapping (i.e. the 1st record in the sort order is the default visit record type) Name, Account Record Type and Visit Record Type fields are read-only in the edit screen - The administrator can delete the mapping record When the record is deleted, the confirmation message: "TBD" (Cancel/Delete) is displayed After user proceeds to delete it, the success toast message: "The visit record type mapping "{visit record type mapping name}" was deleted" is displayed Product Discussion Settings - The product section displays the list of on-label detail products (products with Brand, Indication, Brand-Indication, Therapeutic Area in LifeSciMarketableProduct) - The product section is sorted by product name alphabetically (Demo feedback - Out of 258 scope -> Fit&Finish bucket for 260) The user can search products by product name Product search should follow the same UI pattern and UX as Admin Console - Product - Product Hierarchy Search text field is blank by default Search text field has x button to reset the search key word Search is run for a single key word with partial match after user presses Enter key Search is run against product name in LifeSciMarketableProduct - The administrator select a product and choose which product discussion type (record type) is available for the product (If not set, all the discussion types assigned to the user's profile are available for the product) - For the available record type, the administrator can activate the following 3 settings (disabled by default): - Add discussion by default - when a product is added, the discussion form should be displayed by default without a user clicking "+ Add Discussion" - The setting gets automatically checked-on (activated) and disabled when "Require discussion to submit" is checked

Area	User Story	Acceptance Criteria
		- on - Require discussion to submit - make a discussion required to submit a visit - Limit to 1 discussion - only one discussion record can be added per visit. Once a discussion is added, "+ Add Discussion" will be hidden Scheduled Job - The administrator can run or schedule Provider Account Territory Information Job - The page header: "Visit Jobs" - The section title: "Update Provider Account Territory Information" - The section description: "Use visit data to calculate Year to Date Visits, Next Visits, and Last Visits on Provider Account Territory Information records." - After the job is run, the following fields in Provider Account Territory Information entity are updated: - Last Provider Visit (Lookup to Provider Visit) - Last Provider Visit Date - Next Provider Visit (Lookup to Provider Visit) - Next Provider Visit Date - Next Provider Visit Objective - Year To Date Provider Visit Count

Visit Settings

- Master GitHub Repository Link

Section	Setting Name	Description	Type	Default Shipped Value	Available Values
Visit Settings	Skip visit preview screen on planner	Tapping a visit in the Calendar opens the visit record directly, skipping the preview screen for faster access	Checkbox	Disabled	
	Set blank date/time in Planned Start Time	Set blank date/time in Planned Start Time to ensure the field users actively select the correct date and time	Checkbox	Disabled	
	Default Visit Duration in Minutes	Planned End Time is auto-populated based on the Planned Start Time + Default Visit Duration. If the setting is blank, 30 min is set	Number	15	
	Future Visit Limit in Days	Defines how many days in advance a user can schedule a visit	Number	Blank	
	Visit Conflict Validation Period in Days	If another visit within the period exists for the same account, the system triggers a conflict	Number	Blank	

Section	Setting Name	Description	Type	Default Shipped Value	Available Values
		warning or error			
	Visit Conflict Validation Mode	Select Error or Warning for the visit conflict validation	Picklist	Blank	Error, Warning
	Submission Delay Reason Fields	Defines the field type used to capture reasons for delayed visit submissions for compliance and reporting; if set to None, the feature is disabled	Picklist	None	None, Picklist, Text
	Submission Delay Reason Threshold in Days	Defines how many days after the planned visit date the system requires users to provide a reason for the delayed submission	Number	Blank	
	Unlock submitted visit	Defines if user can unlock the submitted visit	Checkbox	Disabled	
Geolocation Settings	Capture geolocation on signing	Capture geolocation when a signature is accepted	Checkbox	Disabled	
	Capture geolocation on submit	Capture geolocation when a visit is submitted	Checkbox	Disabled	
	Maximum Allowed Distance of Visit in Meters	Displays a warning if the distance between the user's device and visit's location is longer than the maximum allowed distance	Number	500	
Product Detailing Settings	Show recent details and product selector	Displays up to 10 most recently detailed products with a button to open the product selector in the Product Details sidebar	Checkbox	Disabled	
	Discuss off-label products	Allows users to select off-label product combinations	Checkbox	Disabled	
	Next Visit Product Objectives Fields Type	Specifies the field type for entering the next product-level visit objective; if set to None, the feature is disabled	Picklist	None	None, Picklist, Text, Picklist and Text
Samples and Items Settings	HCO Types Allowed for Samples and Items	Specifies the business account record type for which Sample and Marketing Item features are enabled	Multi-select picklist	Blank	Account record types
	Require batch number	Requires entry of a batch number when recording sample drops	Checkbox	Enabled	
	Show expired batches	Includes expired batch numbers in the production batch picklist	Checkbox	Disabled	
	Validate sample limits	Enforces sample limit rules for both sample drops and Direct to Practitioner samples	Checkbox	Disabled	

Section	Setting Name	Description	Type	Default Shipped Value	Available Values
	Validate sample inventory	Performs an inventory check before processing sample drops	Checkbox	Disabled	
	Sample Inventory Validation Mode	Choose Error or Warning for sample inventory validation	Picklist	Blank	Error, Warning
	Validate territory quantity allocation	Performs territory quantity allocation check before processing sample drops and Direct to Practitioner samples	Checkbox	Disabled	
	Territory Quantity Allocation Validation Mode	Choose Error or Warning for territory quantity allocation validation	Picklist	Blank	Error, Warning
Signature Settings	Show Document ID	Displays the Document ID button on the Visit Engagement page	Checkbox	Disabled	
	Show request receipt on signature page	Displays "Request a Receipt" checkbox in the signature page	Checkbox	Disabled	
	Capture signature page snapshot (Out of scope for 258)		Checkbox	Disabled	
Attendee Settings	Account Searchable Field (Out of scope for 258)		Text	Blank	
	Show attendee details (Out of scope for 258)		Checkbox	Disabled	
Visitor Settings	User Profiles Available in Visitor Search	Defines which user profiles appear in Visitor Search	Multi-select picklist	Blank	Available Profiles in the org

Jobs

Area	User Story	Acceptance Criteria
Update Provider Account Territory Information	As an administrator, I must be able to run or schedule a job to populate visit related information in Provider Account Territory Information, so that Next/Last Visit Information are quickly accessible in Account Profile page	- The administrator can run or schedule Provider Account Territory Information job from Admin Console - Visit Administration - Scheduled Job - Page header: "Visit Jobs" - Job header: "Update Provider Account Territory Information" - Job description: "Use visit data to calculate Year to Date Visits, Next Visits, and Last Visits on Provider Account Territory Information records." - After the job is run, the following fields in Provider Account Territory Information entity are updated: - Last Provider Visit (Lookup to Provider Visit) - Last Provider Visit Date - Next Provider Visit (Lookup to Provider Visit)

Area	User Story	Acceptance Criteria
		■ Next Provider Visit Date ■ Next Provider Visit Objective ■ Year To Date Provider Visit Count
Share Visit records	As an administrator, I must be able to run or schedule a job to share visits to accounts in users' territories after account territory realignment, so that field users have access to past visits to the accounts in their new territory	• The administrator can run or schedule Visit Share Management job from Admin Console - Territories ○ Page header: "Visit Share Management Jobs" ○ Job header: "Share Visits After Territory Realignment" ○ Job Description: Run or schedule a job to share an account's visits with users after an account territory realignment. Run or schedule this job only after the Update Provider Account Territory Information job and other territory assignment rules are complete. • After the job is run, the visits are shared with territories based on account territory alignment.

Quick Actions

Type of Quick Actions:

Type	Definition	Configuration	Supported Actions
Salesforce Actions	Actions created in "Button, Links, Actions" and can be added to the page layout using page layout configuration	• Activation: Add the actions from Mobile & Lighting Action in the object page layout: ○ For Visit SPA - Account page layout ○ For Visit record page - Visit page layout • Sort Order: The actions are displayed by MetadataActionItem's sortOrder (i.e. the order of actions in Salesforce Mobile and lighting Experience Actions)	• New Inquiry • Survey (only for Visit SPA) • Send Email • Last Visit • Next Best Customer • View Online (only for Visit record page in mobile)
Quick Actions	Actions used in places that don't use Page Layout such as Homepage, Planner/Calendar	• Activation: Admin Console - Quick and Custom Action Administration - Quick Actions • Sort Order: The actions are displayed by the SortOrder set in the Quick Actions Administration	Not applicable to Visit

Type	Definition	Configuration	Supported Actions
Custom Actions	Actions used to open URLs or other apps	- Activation (Detail steps are in AC): - Create a placeholder visualforce page and assign it to user's profile - Create a custom action in Buttons, Links, and Actions in the respective object - For Visit SPA - Account object - For Visit record page - Visit object - Add the action in the respective object page layout: - For Visit SPA - Account page layout - For Visit record page - Visit page layout - Create a configuration for the custom action from Admin Console - Quick and Custom Actions Administration - Sort Order: The actions are displayed by MetadataActionItem's sortOrder (i.e. the order of actions in Salesforce Mobile and lightning Experience Actions)	- External URL - App - Utterance
Hard-coded Action	Hard-coded actions with no configuration capability		- Attendee Visit - hard-coded in Attendees action displayed before SF Actions/Custom Actions - Schedule Next Visit - Web - hard-coded in the Visit SPA sidebar - Mobile - hard-coded in the FAB (Floating Action Button) displayed after the SF Actions/Custom Actions

Area	User Story	Acceptance Criteria
Quick Actions for Visit SPA	As an administrator, I must be able to configure quick actions for Visit SPA , so that field users can efficiently access and perform key activities related to their customer interactions	Salesforce Actions - The following actions are available OOTB - Inquiry - Survey - Send Email - Last Visit - Next Best Customer - The administrator can add/remove the actions to/from the Salesforce Mobile and Lightning Experience Actions section of Account page layout to control the availability of actions for the primary account and attendees in Visit SPA

Area	User Story	Acceptance Criteria
		Custom Actions to open an URL - The administrator can configure a quick action to open an external URL by following the steps: Create a placeholder visual force page per object from Setup. Select the Available for Lightning Experience, Experience Builder sites, and the mobile app checkbox - For the content of the visualforce page, it must have the object name in standardController: <pre><apex:page standardController="Account"> <h1>Custom Action Template</h1> This is a Placeholder for adding custom action to iPad. </apex:page></pre> - Enable the created page for the desired profiles: - Open Setup - Profiles - Select the desired profile - Select Visualforce Page Access - Click Edit - Move the desired VisualForce page from Available Visualforce Pages to Enabled Visualforce Pages - Click Save - Add a new action in Buttons, Links, and Actions in Account entity - Action Type: Custom Visualforce - Visualforce Page: Placeholder visual page created in step.a - Height: <i>Any</i> - Standard Label Type: <i>None</i> - Label: The label of the action - Name: The API name of the action - Create a configuration for the custom action from Admin Console - Quick and Custom Actions Administration - Label: The label of the action (Note: This label is currently not translatable) - Name: The API name of the action - Entity Object: SObject - Action Type: URL - Target Type: External - Action Target: Specify the URL before parameters - Target Parameters: Specify the URL parameters (e.g. q={Account.Name}) Note: "?" after the URL don't need to be added. It will be automatically appended after the URL - Target Parameter Source: Specify the URL parameters for attendee action - Supported parameters: {Account.<fieldName>} {User.<fieldName>} {SessionId} - Target Parameters Source: Used for attendees actions. {"Account":["<fieldName1>","<fieldName2>","..."],"User":["<fieldName1>","<fieldName2>","..."]} - Quick Action: Enter the API name of the standard action created in step.C

Area	User Story	Acceptance Criteria
		Entity Name: Account
Quick Actions for Visit record page	As an administrator, I must be able to configure quick actions for Visit record page , so that field users can efficiently access and perform key activities related to their customer interactions	Salesforce Actions - The following actions are available OOTB: - Inquiry - Send Email - Last Visit - Next Best Customer - View Online (mobile only) - New Visit - The administrator can add/remove the actions to/from the Salesforce Mobile and Lightning Experience Actions section of Visit page layout to control the availability of actions in the Visit record page Custom actions to open an URL - The administrator can configure a quick action to open an external URL by following the same steps in Custom Aactions to open an URL: - In step c., add the action to Visit page layout - In step d., specify Entity Name: Visit

Visit Engagement (Visit SPA)

Page Layout Configuration

Area	User Story	Acceptance Criteria
Visit SPA Layout	As an administrator, I must be able to configure Visit SPA Layout for different persona as per the business and compliance requirements, so that field users can apture relevant visit details	Visit Information: - The administrator can configure the visit information fields as below: - The following fields from Visit entity are hard-coded in the below order from left to right and displayed regardless of whether the fields are in the page layout of not. They are added to the Life Sciences specific master layout: Life Science Visit Layout (added in 260) by default. - Account - Place - Planned Start Time - Planned End Time - Next, additional supported standard fields: Record Type, Channel and Status from Visit page layout are displayed if added to the page layout. - Next, additional standard and custom fields configured in Provider Visit page layout are displayed. The following fields are added to the master page layout by default. The administrator can remove them or add additional fields - IsConfirmed - If Account, Place, PlannedStartTime, PlannedEndTime, Channel and Status derived fields (which exist in Visit) are

Area	User Story	Acceptance Criteria						
		configured in Provider Visit page layout, they will be ignored in the Visit SPA as they are duplicate of Visit fields. These derived fields from Visit are available in Provider Visit entity for the easier reporting purpose. ○ The labels come from the object field labels and can be updated by overriding the labels via Setup -> Rename Tabs and Labels Record Type: ● The administrator can configure record types for Visit as below: ○ Set up record types with exact same API name and label in both Visit and Provider Visit entities ○ Set up page layouts in both Visit and Provider Visit and assign them to appropriate record types ○ Add RecordTypeId field in Visit page layout (If RecordTypeId field is added to the Provider Visit page layout, it will be ignored in Visit SPA) ○ (Optional) If only specific record types need to be available for specific type of accounts, the mappings can be configured in Visit Record Type Mappings settings. ○ (Applicable for web only) In the Visit object and Provider Visit object, go to Object Manager > Buttons, Links and Actions > Edit New button > Check "Skip record type selection page" in Override Properties to hide the record type selection screen Sidebar: ● The administrator can configure the sidebar menus by adding the corresponding related lists to the Visit page layout ○ Recommendations sidebar is hard-coded (displayed if recommendation exist) as the 1st item in the sidebar menu and can't be added or removed (the menu is displayed only when the recommended messages and/or presentations data are available for the account) ○ The rest of the sidebar menus are displayed as per the Visit page layout related lists configuration ■ Maximum 10 related lists (8 OOTB related lists + max 2 custom objects) are supported in Visit SPA including: ● Presentation Forum ● Provider Visit Detailing Product ○ If Product Message feature is used, Provider Visit Product Detailing Message related list needs to be added in the page layout in order to display associated messages to the selected products, but this related list won't be displayed in the sidebar ○ If Product Discussion feature is used, Provider Visit Product Discussion related list needs to be added in the page layout in order to display "+ Add Discussion" link under the detailing product section, but this related list won't be displayed in the sidebar ● Product Disbursement ● Provider Visit Requested Sample ● Provider Visit Marketing Item ● Attendees ● Custom Objects ■ Sidebar menus are sorted by the order of the related list in the Visit page layout ■ By default, related list entity names are displayed as the sidebar menus and the administrator can override the labels by renaming the entity label via Setup -> Rename Tabs and Labels <table><tr><th>Sidebar Menu Default Label</th><th>Sidebar Menu Suggested Label</th><th>Steps to override the label</th></tr><tr><td>Recommendations (Custom Label)</td><td>Recommendations</td><td>Setup -> Translation</td></tr></table>	Sidebar Menu Default Label	Sidebar Menu Suggested Label	Steps to override the label	Recommendations (Custom Label)	Recommendations	Setup -> Translation

		Samples (Product Disbursement), Direct to Practitioner (Provider Visit Requested Sample) and Marketing Items (Provider Visit Marketing items) support additional custom fields, except the documented fields.																							

Products (Detail/Sample/Marketing Item) Configuration

Area	User Story	Acceptance Criteria
Detailed/Discussed Products (Entity: Provider Visit Product Detailing)	As an administrator, I must be able to set up brand, indication and therapeutic area that are discussed in the visit, so that field users can accurately capture product discussions and ensure alignment with compliance and brand reporting requirements	The administrator can configure the products as follows: - Create a product in Life Science Marketable Product - Type = 'Brand', 'Indication', 'TherapeuticArea' or 'Brand-Indication' - Sort Order = the order in which the products are displayed in Visit SPA - IsCompetitorProduct = 'False' - Active = True - Effective Start Date and Effective End Date are used for controlling the availability of the message as of visit's planned start/end time - Align products to applicable territories From UI: - Admin Console > Products > Product Alignment - Search and check on a product in Products area - Search and check on territories or territory hierarchies - Admin Console > Products > Product Alignment Jobs Dataload: - Load Product Territory Availability record with Status = "Draft". - Admin Console > Products > Product Alignment > Product Alignment Jobs - Run the Publish Draft Product Territory Alignments Batch Job Note: This step creates records in Product Territory Availability and Product Territory Detail Availability entities - Product Territory Availability stores Inclusion rules at territory level (Alignment Type = Territory Inclusion) or territory hierarchy level (Alignment Type = Territory and Subordinates Inclusion) and Exclusion rules at individual territory level (Alignment Type = Territory Exclusion) - Product Territory Detail Availability stores the Inclusion rules at an individual territory level. This is automatically created based on Product Territory Availability records - Product Territory Availability records are used to check product exclusion for a territory - Product Territory Detail Availability are used to check product inclusion (availability) for a territory (Optional) Set territory-specific sort order - Admin Console > Products > Territory Products - Search and click on a territory - Use up/down arrow to change the sort order
Product Message (Entity: Provider Visit Detailing Product Message)	As an administrator, I must be able to set up product messages, so that field users can deliver consistent and approved product information during HCP interactions, ensuring compliance with promotional and regulatory standards.	The administrator can configure the message as follows: - Create a message record in Product Guidance - Type = 'Message' - Content Text = the message texts displayed in Visit SPA - Reactions = list of reactions, separated by semicolon. If not configured, standard reactions (Positive / Neutral / Negative) are displayed in Visit SPA - Reaction Selection Hidden = enable if reaction should be hidden - Group Name and Group Sequence are used to group messages under Group Name sorted by Group Sequence in Visit SPA - Active and Effective Start Date and Effective End Date are used for controlling the availability of the message as of visit's planned start/end time

Area	User Story	Acceptance Criteria
		- Align messages to applicable territories (Below steps create Product Guidance share records) - Admin Console > Products > Product Alignment - Search and check on a product in Products area - Search and check on territories or territory hierarchies - Click on the territory name link - Select messages to share to the territories
Sample (Product Disbursement entity)	As an administrator, I must be able to set up sample products, so that field users can accurately record sample disbursements during HCP visits in compliance with regulatory requirements and company policies	The administrator can configure sample products as follows: - Define a record type for sample in Product2 - Map Product Record Type to Product Specification Type - Setup > Product Specification Record Type - Create a mapping for a sample product: - Record Type: record type defined in Step1 - Product Specification Type = 'LSSampleProduct' - Create a sample product record in Product 2 with the record type defined in Step1 - Specification Type: 'LSSampleProduct' is auto-populated based on the mapping - Create a sample product record in Life Science Marketable Product - Type = 'Product' - AllowedDistributionMethod = 'Ship' OR 'Drop and Ship' - IsCompetitorProduct = 'False' - Active = 'True' - Effective Start Date and Effective End Date are used for controlling the availability of the message as of visit's planned start/end time - Product Specification Type = 'LSSampleProduct' is auto-populated based on the mapping - Parent Brand Product = specify the parent brand product (Note: If this is not specified, the parent product is not displayed under Product Disbursement sidebar menu in Visit SPA) - Create a Location for the user (1:1 relationship for LSC) - Create a Product Item record to link a sample product to a location Align products to applicable territories The administrator can configure sample batches as follows: - Create a Production Batch record to link a batch to a sample product - Populate Batch/lot number in Unique Identification Number field - Populate Active and Expiration Date accordingly - Create a Product Batch Item record to assign a batch (Production Batch Item) to the user (Product Item) - Populate Production Batch Active for active batch assignment - Populate Remaining Quantity - Share Production Batch, Location, Product Item and Product Btch Item records to the user
Direct to Practitioner	As an administrator, I must be able to set up Direct to	The administrator can configure Direct to Practitioner sample products as follows: Define a record type for sample in Product2

Area	User Story	Acceptance Criteria
(Provider Visit Requested Sample entity)	Practitioner sample products, so that field users can initiate and track sample shipments to HCPs accurately, ensuring compliance with regulatory requirements and alignment with sampling strategy	- Map Product Record Type to Product Specification Type - Setup > Product Specification Record Type - Create a mapping for a sample product: - Record Type: record type defined in Step1 - Product Specification Type = 'LSSampleProduct' - Create a sample product record in Product 2 with the record type defined in Step1 - Specification Type: 'LSSampleProduct' is auto-populated based on the mapping - Create a sample product record in Life Science Marketable Product - Type = 'Product' - AllowedDistributionMethod = 'Drop' OR 'Drop and Ship' - IsCompetitorProduct = 'False' - Active = 'True' - Effective Start Date and Effective End Date are used for controlling the availability of the message as of visit's planned start/end time - Product Specification Type = 'LSSampleProduct' is auto-populated based on the mapping - Parent Brand Product = specify the parent brand product (Note: If this is not specified, the parent product is not displayed under Provider Visit Requested Sample sidebar menu in Visit SPA) Align products to applicable territories
Marketing Item (Provider Visit Marketing Item entity)	As an administrator, I must be able to set up marketing items or leave behinds, so that field users can accurately document materials provided during product discussions to support compliance tracking, marketing analysis, and promotional activity reporting	The administrator can configure Direct to Practitioner sample products as follows: - Define a record type for sample in Product2 - Map Product Record Type to Product Specification Type - Setup > Product Specification Record Type - Create a mapping for a sample product: - Record Type: record type defined in Step1 - Product Specification Type = 'LSPromotionalItem' - Create a sample product record in Product 2 with the record type defined in Step1 - Specification Type: 'LSPromotionalItem' is auto-populated based on the mapping - Create a sample product record in Life Science Marketable Product - Type = 'Product' - Product Specification Type = 'LSPromotionalItem' is auto-populated based on the mapping - IsCompetitorProduct = 'False' - Active = 'True' - Effective Start Date and Effective End Date are used for controlling the availability of the message as of visit's planned start/end time - Parent Brand Product = specify the parent brand product (Note: If this is not specified, the parent product is not displayed under Provider Visit Marketing Item sidebar menu in Visit SPA) Align products to applicable territories

Product Discussion Configuration

Area	User Story	Acceptance Criteria
Product Discussion (Provider Visit Product Discussion)	As an administrator, I must be able to set up product discussions, so that field users can capture additional, product-specific information during HCP interactions, enabling more detailed insights for compliance, medical, and commercial analysis	The administrator can configure product discussions as follows: (Optional) If there are multiple types of product discussion, define a record type per product discussion type - Create custom fields to store additional information. (Note: By default, only Notes field is available) - Add the fields to the respective Provider Visit Product Discussion page layout (Optional) Admin Console > Visit Administration > Product Discussion Settings

Next Visit Objective Configuration

Area	User Story	Acceptance Criteria
Next Visit Objective	As an administrator, I must be able to set up the next visit objectives, so that field users can plan follow-up interactions more strategically and ensure continuity in HCP engagement aligned with business goals and compliance requirements.	The administrator can configure next visit objectives as follows: - Configure Next Visit Objective in Provider Visit Page Layout: - Add a new section named "Next Visit Objectives" with 1 column type - Depending on the company policy to allow free text entry or not, the administrator can add either "Provider Visit Next Visit Objective Type" (multi-select picklist) or "Provider Visit Next Visit Objective" (multiline text) field in the Provider Visit page layout - If "Provider Visit Next Visit Objective Type" is used, configure the picklist values from Object Browser

Area	User Story	Acceptance Criteria
Product Level Next Visit Objective	As an administrator, I must be able to set up the next visit objectives for a specific discussed products, so that field users can plan follow-up product discussions more strategically and ensure continuity in HCP engagement aligned with business goals and compliance requirements.	The administrator can configure next visit objectives for the discussed product as follows: - Set the next visit objectives fields type in Admin Console - Admin Console > Visit Administration > Visit Settings > Next Visit Product Objectives Fields Type - None - The link to enter next visit objective is not available for users - Picklist - users can select one next visit objective from the picklist - Text - users enter next visit objectives - Picklist and Text - users select one next visit objective from the picklist and optionally enter objectives in texts - If "Picklist" or "Picklist and Text" fields type is selected in Step1, set up Next Visit Objective picklists: - Create a message record in Product Guidance - Type = 'Objective' - Content Text = the objective texts displayed in Visit SPA - Active and Effective Start Date and Effective End Date are used for controlling the availability of the next objective record as of visit's planned start/end time - Align next objectives to applicable territories (Below steps create Product Guidance share records) - Admin Console > Products > Product Alignment - Search and check on a product in Products area - Search and check on territories or territory hierarchies - Click on the territory name link - Select objectives to share to the territoire

Compliance Statements Configuration

Area	User Story	Acceptance Criteria
Compliance Statements Definition	As an administrator, I must be able to configure compliance statements for Visit as per the business and compliance requirements, so that field users are guided appropriately and stay compliant during visit reporting	The administrator can set up compliance statements definition as follows: - Create records in Compliance Statement Definition entity: - Module Type: Visit - Statement Type: - Compliance Note - to show the compliance statements without an agreement checkbox - Compliance Agreements - to show the compliance statements with an agreement checkbox - Statement Requirement Level: - None - for Compliance Note Statement TYPe - Optional / Required - for Compliance Agreements to indicate whether an agreement checkbox is optional / required - Display Order: set the display order in case of showing multiple compliance statements - Statement Text: set the compliance statement texts displayed in Compliance Statements section of the Visit SPA - Judirsdcition Type and Jurisdiction Countries are not used in Visit - Share the records to appropriate users or territories

Signature Page Configuration (WIP)

Area	User Story	Acceptance Criteria
------	------------	---------------------

Signature Page Layout	As an administrator, I must be able to configure the signature page for Visit as per the business and compliance requirements, so that field users can capture signatures in a compliant manner that meets regulatory standards and ensures proper documentation of sample disbursement or promotional interactions	The administrator can configure the signature page as follows: Signature Header fields • Hard-coded fields + Provider Visit field set + Business License field set ◦ Hard-coded fields: ■ Account Name (Professional Title) ■ Place ■ Signed Date • Default fields in the field set: ◦ Provider Visit field set: Shipping Address ■ Available fields in the field set: Channel, CreatedBy, Shipping Address, Planned Start Time, Planned End Time, Shipping Address, Territory Name, custom field ◦ Business License field set: License Number, Period End (Expiration Date) ■ Available fields in the field set: License Number, Period End, Period Start, State Distributor License Category, custom field Note: If samples are added in the visit, the license information fields associated to the visit's place will be displayed. If Direct to Practitioner samples are added in the visit (i.e. shipping address is not blank), the license information fields associated to the shipping address will be displayed. Show “Request Copy” checkbox • Enable “Show request receipt on signature page” setting in Admin Console > Visit Administration > Visit Settings to display “Request Copy” checkbox at the top left of the signature page Notes: This checkbox updates IsSignatureCopyRequested flag in DigitalSignature entity, so that customers can build a logic to send a copy via email based on this flag. There is no OOTB logic Configure Details column in Activity Table • Product Discussions: Provider Visit Detailing Product field set + Life Science Marketable Product field set ◦ Default fields in the field set: ■ Provider Visit Detailing Product field set: Detailing Product • Available fields in the field set: Product, Product Hierarchy Name, custom field ■ Life Science Marketable Product field set: Manufacturer (In the case of detailing product, this field is expected to be null and not displayed) • Available fields in the field set: Manufacturer, State Distributor License Category, custom field • Samples: Product Disbursement field set + Life Science Marketable Product field set ◦ Default fields in the field set: ■ Provider Visit Detailing Product field set: Product Name, Production Batch Number, Quantity Disbursed • Available fields in the field set: Product Name, Production Batch Number, Quantity Disbursed, custom field ■ Life Science Marketable Product field set • Direct to Practitioner: Provider Visit Requested Sample field set + Life Science Marketable Product field set ◦ Default fields in the field set: ■ Provider Visit Requested Sample field set: Product, Requested Quantity, custom field ■ Life Science Marketable Product field set • Marketing Items shows: Provider Visit Marketing Item field set + Life Science Marketable Product field set ◦ Default fields in the field set: ■ Marketing Item field set: Product, Quantity, custom field
-----------------------	---	---

Area	User Story	Acceptance Criteria
		Life Science Marketable Product field set
Signature Disclaimer	As an administrator, I must be able to configure the signature disclaimer texts for Visit as per the business and compliance requirements, so that field users can present the correct legal and regulatory language during the signature capture process	The administrator can set up the signature disclaimer texts as follows: - Create records in Compliance Statement Definition entity: - Module Type: Visit - Statement Type: Disclaimer - Statement Requirement Level: None - Display Order: set the display order in case of showing multiple disclaimer texts - Statement Text: set the disclaimer texts displayed in the Disclaimer area of the signature page - Jurisdiction Type and Jurisdiction Countries are not used in Visit - Share the records to appropriate users or territories
Signature Area Logo	As an administrator, I must be able to configure my company logo in the signature area for Visit, so that the signature capture screen reflects our branding and provides a professional and trusted experience	The administrator can set up company logo for the signature area (where HCP signs). Note: This is common across the features such as Inquiry and Consent. - Setup > Static Resources - Create a static resource called SignatureAreaLogo and upload a logo image file - Admin Console > Mobile > UI - Create a UI schema called SignatureAreaLogo

License Validation Configuration (WIP)

Details should be documented as part of Business License Administration admin guide

Area	User Story	Acceptance Criteria

Territory Product Quantity Allocation (WIP)

Details should be documented as part of Samples Limits and Product Allocation admin guide

Area	User Story	Acceptance Criteria
Territory Product	As an administrator, I must be	Direct to Practitioner sample quantity allocation (and maximum quantity limits) to territories:

Quantity Allocation Setup For Direct to Practitioner samples	able to allocate Direct to Practitioner sample quantities to territories, so that sample distribution aligns with the company's business strategy, and supports effective field execution.	The administrator can allocate Direct to Practitioner sample quantities to territories as follows: - Define the time period to the product quantity allocation applies by creating a Time Period record via the standard UI or data loading - Name: Any name for the time period - Start Date: Start date and time of the Time Period - End Date: End date and time of the Time Period - Define the sample quantity allocation to a territory by creating a Territory Product Quantity Allocation record for a product and sharing it with Read/Write access to the territory via the standard UI or data loading - Time Period: The time period defined for the territory - Allocation Type: "Ship" - Product: The product to which the quantity allocation applies - Territory: The territory to which the quantity allocation applies - Allocated Quantity: the allocated quantity of samples - Maximum Disbursement Limit Quantity: maximum quantity limit per visit - Enable "Validate territory quantity allocation" setting and "Territory Quantity Allocation Validation Mode" (Error/Warning) in Admin Console - Visit Administration
Territory Product Quantity Allocation Setup For Samples	As an administrator, I must be able to set max limit per visit for samples, so that sample disbursement aligns with the company's business strategy, and supports effective field execution.	Samples maximum quantity limits The administrator can set the maximum limit per visit for samples as follows: - Define the time period to the product quantity allocation applies by creating a Time Period record via the standard UI or data loading - Name: Any name for the time period - Start Date: Start date and time of the Time Period - End Date: End date and time of the Time Period - Define the max limit per visit for a sample by creating a Territory Product Quantity Allocation record for the product and sharing it with Read access to the territory via the standard UI or data loading - Time Period: The time period defined for the territory - Allocation Type: "Drop" - Product: The product to which the quantity allocation applies - Territory: The territory to which the quantity allocation applies - Maximum Disbursement Limit Quantity: maximum quantity limit - Enable "Validate territory quantity allocation" setting and "Territory Quantity Allocation Validation Mode" (Error/Warning) in Admin Console - Visit Administration

Visit Lightning Record Page Layout

Area	User Story	Acceptance Criteria
Page Layout Configuration		The administrator can configure the Visit record page (lightning record page) as follows: Highlight panel - Fields in the highlight panel can be configured using the compact layout (Object manager > Visit > Compact Layouts) Tabs - Tabs can be configured using the lightning app builder (Object manager > Visit > Lightning Record Pages)

Area	User Story	Acceptance Criteria
		- The following features are using LSC custom components and require dedicated tabs: - Surveys - Expenses - Ratings - Other components can be placed in any tab. The administrator can define one or more tabs and organize and place the applicable related lists as per their business requirements. For the streamlined experience, it is recommended to place all the related lists editable in Visit Engagement (Visit SPA) in Details tab and other related features that do not require a dedicated tab in Related tab. - For standard related lists, remove "New" button in Visit page layout related list configuration - See Recommended Tabs and Sections configurations Actions - The administrator can configure the following actions - Edit (Displayed in Information section) - Delete - Unlock - Quick Actions - Refer to Quick Actions for Visit Record Page Unlock - Object Manager > Visit > Lightning Record Pages > Click a record page - Upgrade to Dynamic Actions if not already enabled - Click on Add Action to add "Unlock" action - Set visibility filter for "Unlock" button: Status = Completed AND ParentVistild = null - Admin Console > Visit Administration > Visit Settings > check on "Unlock Submitted Visit" for the org/profile/user who need access to "Unlock" button Note: The admin console setting does not control the visibility of "Unlock" button, i.e. if the setting is not enabled for the user, the button is displayed and when the user clicks/taps it, an error message is displayed. It is optionally possible to hide the button by adding a custom boolean field in User object such as "Unlock Submitted Visit" and use this field as a filtering criteria for "Unlock" button.

Recommended Tab and Sections Configurations

Tab	Section or Related List	Component	Additional Configuration Steps
Details	Information section	Custom: Multi-Object Record View	Multi-Object Record View component displays configured fields in Visit page layout in Information section and configured fields in Provider Visit page layout in Provider Visit Information section. It is recommended to hide the header of Provider Visit Information section to show all the fields in one section.

			Steps: Object Manager > Provider Visit > Page Layouts > Edit the page layout > Open Section Properties of Provider Visit Information section > Check off "Display Section Header On - Detail Page"
	Presentation Forums	Standard: Related List - Single	Configure below in the related list configuration in Visit Page Layout - Hide "New" button - Configure displayed columns
	Provider Visit Product Detailings	Standard: Related List - Single	
	Provider Visit Detailing Product Messages	Standard: Related List - Single	
	Provider Visit Product Discussions	Standard: Related List - Single	
	Product Disbursements	Standard: Related List - Single	
	Provider Visit Requested Samples	Standard: Related List - Single	
	Provider Visit Marketing Items	Standard: Related List - Single	
	Attendees (Child Visits)	Custom: Related List - Life Sciences	If "Child Visits" standard related list is configured, remove it from the visit record page. Configure Related List - Life Sciences and populate the following fields: • Object API Name: Visit • Field Set API Name: lsc4ce__RelatedList • Label API Name: {!\$Label.lsc4ce__Attendees} • Icon: choose an icon from SLDC, for example "standard:people" • Where Clause: ParentVisitId = '{recordId}' • Check on "Show record count"
Related	Visitors	Custom Managed Button: "ManageVisitors" + Standard: Related List - Single	
	Inquiries	Standard: Related List - Single	
	Video Call Recordings	Custom: Video Call Recording List	Applicable only when Remote Engagement is used. Refer to Remote Engagement Admin Guide for details
	Assessment Tasks	Custom: Related List - Life Sciences	Applicable only to KAM Users Populate the following fields:

			● Object API Name: AssessmentTask ● Field Set API Name: lsc4ce__RelatedList ● Label API Name: {!\$Label.lsc4ce__Attendees} ● Icon: choose an icon from SLDC, for example "standard:people" ● Action Handler API Name: AssessmentTaskActionsHandler ● Where Clause: AssignedToId = '{userId}' AND Status != 'Completed' AND ReferenceRecord.Type IN ('ActionPlan') AND PartyReferenceRecordId IN (SELECT AccountId FROM Visit WHERE Id = '{recordId}') ● Check on "Show record count"
	Files	Standard: Related List - Single	This component allows attaching files to the visit record. Select either of the options below in "Attachment Download Method" in DBSchema_Visit for "Add Files" button to be available in mobile: ● Background: Salesforce Files are downloaded to the mobile application during synchronization. ● Cache: a Salesforce File is downloaded to the mobile application when a sales rep user tries to preview or download the attachment.
{!\$Label.lsc4ce__Surveys}	Surveys	Custom: Visit Survey List View	
{!\$Label.lsc4ce__Expenses}	Expenses	Custom: ExpensesListView	
{!\$Label.lsc4ce__Ratings}	Ratings	Custom: Ratings	This component shows the exact same page as Account Profile - Ratings tab. Refer to Ratings Admin Guide on how to configure Ratings tab

Triggers

Reference: [\[256\] Life Science Visit and Provider Visit trigger handlers](#) (created by the engineering team) - the trigger handler names and description are not up to date in this document. The latest name and description are as approved in [UI Text Review sheet](#) and documented in [Visit Trigger Handlers L\[256\] Life Science Visit and Provider Visit trigger handlersist](#).

Area	User Story	Acceptance Criteria
Visit Trigger Handlers	As an administrator, I must be able to activate/deactivate Visit Administration trigger handlers as per the business requirements, so that system	The administrator can activate/deactivate Visit Administration related trigger handlers from Admin Console > Trigger Handler Administration ● The below trigger handlers with the name and description in Visit Trigger Handlers List are available Note: The trigger handlers activated by default should not be deactivated for the proper functioning of the Visit Management features.

User Story	Acceptance Criteria
behavior can be adjusted quickly to meet compliance and business needs	

Visit Trigger Handlers List

Admin Console > Trigger Handler Administration

Core Functionality Trigger Handlers

The following trigger handlers must be activated to ensure the visit management functions correctly

Trigger Handler Name	Description
ContentDocumentLinkLockHandler	Locks content document link records to prevent changes to files linked to the visit and expense records if the linked visit is submitted.
ContentDocumentLockHandler	Locks content document records to prevent changes to files linked to the visit and expense records if the linked visit is submitted.
PVChangedEventUpdateAccountTerrInfo	Processes provider visit changed events and updates provider visit related fields on Provider Account Territory Information records.
PVLockHandler	Prevents editing provider visit data based on the visit's status and signature state to maintain data integrity.
VisitChangePrimaryAccountHandler	Performs validations, updates related records, and prepopulates fields in the visit to maintain data consistency when the primary account is changed.
VisitLifeScienceAccountListLinkHandler	Clears the Life Science Account List field on the provider visit record if the Planned Start Time is changed on a visit created by applying a routine.
VisitLockHandler	Prevents editing visit data based on the status and signature state to maintain data integrity.
VisitPopulateEndTimeHandler	Automatically sets the Planned End Time by adding the default duration (defined in Default Visit Duration in Minutes" setting in the Admin Console) to the Planned Start Time when a visit record is loaded without a specified Planned End Time.
VisitChangedEventShareHandler	Shares visit records to other users based on the account sharing records. Provider visit records linked to the visit record are automatically shared.

Feature-level Trigger Handlers

The following trigger handlers are optional and should be enabled as per the business requirements

Direct to Practitioner Handlers

Trigger Handler Name	Description
ProviderVisitRqstSampleLockHandler	Prevents changes to provider visit requested sample records if the linked visit is signed or submitted.

Expense Trigger Handlers

Trigger Handler Name	Description
ExpenseLockHandler	Prevents changes to expense records if the linked visit is submitted.
ExpenseParticipantLockHandler	Prevents changes to expense participant records if the linked visit is submitted.
ExpenseParticipantNameHandler	Sets the account or contact name as the Expense Participant Name value.

Group Visit Trigger Handlers

Trigger Handler Name	Description
PVUpdateChildFieldsHandler	Maintains data consistency for group visits by syncing child provider visit records with the parent provider visit records. Automatically updates key fields (Planned Visit Start Time, Planned Visit End Time, and Channel) when the parent visit is modified.
VisitCascadeDeleteHandler	Deletes attendee visits automatically when the parent group visit is deleted, maintaining data integrity.
VisitUpdateChildFieldsHandler	Maintains data consistency in group visits by synchronizing child visit records with their parent visits. Automatically updates key fields (Planned Visit Start Time, Planned Visit End Time, and Channel) when the parent visit is modified.

Intelligent Content Trigger Handlers

Trigger Handler Name	Description
PresentationForumLockHandler	Prevents changes to presentation forum records if the linked visit is submitted.

Marketing Items Trigger Handlers

Trigger Handler Name	Description
ProviderVisitMarketingItemLockHandler	Prevents changes to provider visit marketing item records if the linked visit is signed or submitted.

Product Detailing Trigger Handlers

Trigger Handler Name	Description
ProviderVisitProdDtlLockHandler	Prevents changes to provider visit product detailing records if the linked visit is signed or submitted.
ProviderVisitDtlProductMsgLockHandler	Prevents changes to provider visit detail product message records if the linked visit is signed or submitted.
ProviderVisitProdDtlNameHandler	Generates and populates Product Hierarchy Name for provider visit product detailing records.

Product Discussions Trigger Handlers

Trigger Handler Name	Description
ProviderVisitProdDiscussionLockHandler	Prevents changes to provider visit product discussion records if the linked visit is signed or submitted.

Sample Drops Trigger Handlers

Trigger Handler Name	Description
ProductDisbursementInventoryOpCreation	Creates a corresponding Inventory Operation record when a disbursement is made.
ProductDisbursementSubmitLockHandler	Prevents modifications to Product Disbursement records when the related Visit record is in a locked state, that is, when the visit is signed or submitted.

Visit Surveys Trigger Handlers

Trigger Handler Name	Description
VisitSurveyInviteCascadeDeleteHandler	Deletes survey invitations linked to a visit when a visit is deleted, and prevents deleting them if the visit is submitted to maintain data integrity.

Share Visit Trigger Handlers

Trigger Handler Name	Description
VisitChangedEventShareHandler	Shares visit records to other users based on the account sharing records. Provider visit records linked to the visit record are automatically shared.

Visitor Trigger Handlers

Trigger Handler Name	Description
VisitorLockHandler	Prevents changes to visitor records if the linked visit is submitted.
VisitorShareHandler	Shares the visit records with visitors (users), and automatically shares provider visit records linked to the visit record.

Remote Engagement Trigger Handlers

Trigger Handler Name	Description
RemoteSessionInvitationPVHandler	Manages remote session invitations by creating video calls, email notifications, and session keys for provider visit records.
RemoteSessionInvitationVisitHandler	Manages remote session invitations by creating video calls, email notifications, and session keys for visit records.

Sample Limits Trigger Handlers

Trigger Handler Name	Description
CalculateShippedQuantityHandler	Updates the sample limits remaining quantity by using the shipped quantity in the provider visit requested sample records.

Validation Trigger Handlers

Trigger Handler Name	Description
FutureVisitLimitValidationHandler	Prevents scheduling visits beyond the limit specified in the "Future Visit Limit in Days" setting in Visit Administration in the Admin Console.
VisitConflictValidationHandler	Prevents scheduling another visit for the same account on the same day and by the same user to avoid double-booking.
VisitDelayReasonHandler	Clears the previously entered reason for delay if a user changes the visit date and time and the date no longer exceeds the submission delay threshold.
VisitHolidayValidationHandler	Prevents scheduling a visit on holidays or outside of business hours to maintain compliance with company policies.
VisitMyBestTimeValidationHandler	Prevents scheduling visits outside of best times defined for the account address and user's territory, improving scheduling efficiency and aligning with account availability.
VisitTimeOffValidationHandler	Prevents scheduling a visit that conflicts with a time off territory to support scheduling efficiency and accurate visit reporting.
