

Activity Plans

Drive your omni-channel interaction strategy and establish alignment between your in-field representatives and your organization's objectives by using Activity Plans. The entire process follows a structured workflow involving different user roles to ensure plans are created, reviewed, and executed effectively. The activity plan lifecycle involves distinct stages, from initial setup by activity plan administrators, review by sales representatives and managers, to final execution.

Calendar

Help your sales teams visualize and prioritize key events such as visits, meetings, and time off territory. Schedule events with the best time recommendations to avoid conflicts and create optimized daily plans. Users can save sets of visits as routines and access team member's schedules. With Calendar, users easily identify different types of events alongside their key information and status.

Key Account Management for Customer Engagement

Drive strategic, insight-based customer engagement with Life Sciences Cloud Key Account Management. Foster long-term, high-value partnerships, and achieve common goals by configuring account plans. Implement strategic initiatives focused on specific territories. Identify growth opportunities, anticipate customer concerns, and promote cross-functional collaboration. Enable users to configure records, manage goals, and execute tasks on the web and on an iPad.

Time Off Territory Setup

Let users log and manage their time away from assigned territories. Configure time off territory rules in Planner to prevent users from scheduling events during inconvenient time slots. In addition, create predefined time slot intervals that users can use to create time-offs across multiple days.

Activity Plans

Drive your omni-channel interaction strategy and establish alignment between your in-field representatives and your organization's objectives by using Activity Plans. The entire process follows a structured workflow involving different user roles to ensure plans are created, reviewed, and executed effectively. The activity plan lifecycle involves distinct stages, from initial setup by activity plan administrators, review by sales representatives and managers, to final execution.

REQUIRED EDITIONS

Available in: Lightning Experience

Available in: **Enterprise** and **Unlimited** Editions with Life Sciences Cloud, Life Sciences Cloud for Customer Engagement Add-on license, and the Life Sciences Customer Engagement managed package.

Here's a summary of the key capabilities of Activity Plans.

- Translate your organization's high-level objectives into specific, actionable goals for field teams by creating precise targets based on customer, interaction type, product, and territory.
- Assign different weights to various activities and give your representatives flexibility in choosing how to meet their overall targets and attain their goals.
- Visualize team performance and progress against goals using dashboards and charts on the home

page or account profiles, which can be filtered by activity and product.

- Instantly see the goal status for specific accounts through contextual indicators displayed directly in lists and planners.
- Foster teamwork and a unified view of progress by setting goals that can be shared across multiple territories on aligned accounts.
- Ensure fair and realistic targets by automatically adjusting and prorating goals based on an individual's available working days, accounting for holidays and time off.

Activity Plan Process Workflow

An activity plan provides a strategic framework to guide your interactions with healthcare professionals (HCPs) and help you align with organizational goals. This workflow empowers you to define clear objectives, execute targeted activities, track your progress, and make necessary adjustments to maximize your impact. Start by defining your objectives. After executing the plan, track your progress and make adjustments as needed.

Get Your Org Ready for Activity Plans

Before you set up Activity Plans in Life Sciences Cloud, make sure that you have the required user profiles, licenses, and permission sets.

Add a Tab for Activity Plan Reviews

Streamline the activity plan review cycle and help your users easily review the plan by creating a centralized, dedicated tab in the Life Sciences Commercial app. Grant access to the appropriate user profiles to ensure this tab is visible only to your sales teams. Sales representatives can view, review, and request for change in the activity plans, while managers can view, approve, and update the activity plans, all from one place.

Add the Activity Plan Lightning Components to the Home Page

Embed the Activity Plan Lightning components onto the home page of the Life Sciences Commercial app, for at-a-glance visibility. These components display both a high-level summary of activity plan goals and a more granular, product-by-product performance view. Set this data-rich layout as the new default experience for all sales representatives and managers to keep strategic goals top of mind. Users can also apply various filters to see the actual and potential goal completion rates.

Add the Activity Plan Lightning Components to the Account Record Page

Embed performance metrics directly onto your standard Account record page to provide sales teams with a contextual view of account goals and product-specific progress. Standardize this data-rich layout across your organization to ensure a consistent view of performance on every account. Users can also apply various filters to see the actual and potential goal completion rates.

Set Up Provider Activity Metrics for Activity Plans

Provider Activity Measure Types are specific metrics used to quantify and evaluate the activities and performance of sales representatives. Define measure types based on the Visit, Provider Visit, Provider Visit Detailing, or Life Science Email object, or any custom object you create. These measure types help organizations track the progress and impact of various activities, ensuring that they align with their goals and objectives.

Set Up Ratings, Lists, and Filters for Activity Plans

Help your sales representatives and sales managers view and analyze granular details of the activity plans by configuring ratings, lists, and filters. With these configurations, your users can see dedicated list view filters on the Account record page and use default ratings for filtering activity plan records.

Set Up Batch Size and Calculations for Activity Plans

Configure the core operational settings such as the size of batch jobs that govern your entire Activity Plan management. Define the fundamental calculation logic, such as basing performance pace on actual working days. Enable flexible reporting options to allow users to view their progress by product or non-product activities.

Set Up Activity Plans for Customer Engagement

As an activity plan administrator, use various objects in Life Sciences Cloud to create records and data for activity plans. Define time periods, plans, activity types, goals, and metrics.

Activity Plan Adjustments

Provide sales representatives and other users with the flexibility to modify their activity plan goals and goal measures as required. Users can track activity types for accounts that aren't in the plan or track additional activity types for accounts that are already in the plan. Also, users can update goal measures and remove accounts from a plan. Activity Plans can be adjusted both from the web and the iPad.

Batch Jobs for Activity Plans

Batch jobs are automated processes designed to update and manage multiple activity plan records efficiently. Save time, reduce the risk of manual errors, and maintain the integrity and reliability of activity plan data with these jobs. Make sure that all relevant records are updated consistently and accurately by either triggering a job immediately or scheduling it for later.

Activity Plan Process Workflow

An activity plan provides a strategic framework to guide your interactions with healthcare professionals (HCPs) and help you align with organizational goals. This workflow empowers you to define clear objectives, execute targeted activities, track your progress, and make necessary adjustments to maximize your impact. Start by defining your objectives. After executing the plan, track your progress and make adjustments as needed.

REQUIRED EDITIONS

Available in: Lightning Experience

Available in: **Enterprise** and **Unlimited** Editions with Life Sciences Cloud, Life Sciences Cloud for Customer Engagement Add-on license, and the Life Sciences Customer Engagement managed package.

Define the Plan

Start by defining objectives and targets for your field activities.

- Establish goals for a specific time frame, such as a quarter or fiscal year.
- Define objectives for a specific territory or shared territories, and target the most important accounts.
- Select activity types, and set goals for the interaction channels, such as face-to-face meetings, remote calls, and emails.
- Assign goals for specific products or across multiple products.
- Assign weights to the activities to allow flexibility in achieving overall targets. For example, a face-to-face meeting might contribute more to your goal than an email.

Review and Approve the Plan

After creating the initial plan, conduct a collaborative review to make sure that there's alignment between sales representatives, managers, and the home office.

- Sales representatives review the targets and propose modifications within specific tolerances, and sales managers then validate the requested changes and make other adjustments.
- As an activity plan administrator, you can then review and finalize the plan.

Execute the Plan and Track Progress

With an approved plan, sales representatives can begin engaging with HCPs.

- Ensure the right activities reach the right HCPs at the right time.
- Gain visibility into their goals directly within the workflow and take informed actions during engagements.
- View actionable insights and recommendations that help in deciding which HCPs to visit next.
- Monitor performance against the set goals with the help of clear visualizations and timely progress indicators that identify completed activities, planned activities, and goal attainment.

Set Up Provider Activity Metrics for Activity Plans

Provider Activity Measure Types are specific metrics used to quantify and evaluate the activities and performance of sales representatives. Define measure types based on the Visit, Provider Visit, Provider Visit Detailing, or Life Science Email object, or any custom object you create. These measure types help organizations track the progress and impact of various activities, ensuring that they align with their goals and objectives.

REQUIRED EDITIONS

Available in: Lightning Experience

Available in: **Enterprise** and **Unlimited** Editions with Life Sciences Cloud, Life Sciences Cloud for Customer Engagement Add-on license, and the Life Sciences Customer Engagement managed package.

USER PERMISSIONS NEEDED

To set up provider activity measure types:	Life Sciences Commercial Admin permission set
--	---

Prerequisite: The Activity Type Field and the Activity Type Field Value fields are optional, but if you want to capture these details for visits, add picklist values to the Channel field on the Visit object. Also, review fields on the Provider Visit, Provider Visit Detailing, and Life Science Email objects, and add the required picklist values.

1. From the App Launcher, find and select **Admin Console**.
2. Select **Activity Plans** and then select **Activity Plan Administration**.
3. Click **New**.
4. On the New Provider Activity Measure Type window, for Activity Object, select **Visit**, and enter a label and an API name.
5. Under General Information, complete these fields as needed. For example, you can use these values.
 - a. For Activity Type Field, select **Channel**.
 - b. For Activity Type Field Value, enter an activity type, such as Phone or Remote.
 - c. For Activity Account Field, select **Account**.
For activities set up by using custom objects, select a field that has a lookup to the Account object or select any text field that uses an external identifier.
 - d. For Activity Territory Field, select **Territory**.
For activities set up by using custom objects, select a field that has a lookup to the Territory object or select any text field that uses an external identifier.
 - e. For Activity Type Date Time Field, select **Planned Start Time**.
For custom activities, select the corresponding date time type field on the custom object.
 - f. Set the display order to **1**.
 - g. Select **Active**.
6. Under Activity Status Information, complete these fields, as necessary. For example, you can use these values.
 - a. For Activity Type Status Field, select **Status**.
 - b. For Activity Type Scheduled Status List, enter *Planned;InProgress*.
 - c. For Activity Type Status List, enter *Completed*.
7. Complete the remaining fields based on your business needs.
8. Save your changes.

Set Up Ratings, Lists, and Filters for Activity Plans

Help your sales representatives and sales managers view and analyze granular details of the activity plans by configuring ratings, lists, and filters. With these configurations, your users can see dedicated list view filters on the Account record page and use default ratings for filtering activity plan records.

REQUIRED EDITIONS

Available in: Lightning Experience

Available in: **Enterprise** and **Unlimited** Editions with Life Sciences Cloud, Life Sciences Cloud for Customer Engagement Add-on license, and the Life Sciences Customer Engagement managed package.

USER PERMISSIONS NEEDED

To set up ratings, lists, and filters for Activity Plans: Life Sciences Commercial Admin permission set

Prerequisite: [Configure ratings](#).

1. From the App Launcher, find and select **Admin Console**.
2. Select **Activity Plan** and then select **Activity Plan Settings**.
3. Choose whether to apply the settings org-wide or to a particular user profile.
4. Under the Rating Setting section, select an object and a field.
The Rating column on the Activity Plan Review tab displays the value of this field.
5. Under the Table View Settings section, select whether you want to show activity plans or weighted activity plans on the Accounts page.
6. Save your changes.

Set Up Batch Size and Calculations for Activity Plans

Configure the core operational settings such as the size of batch jobs that govern your entire Activity Plan management. Define the fundamental calculation logic, such as basing performance pace on actual working days. Enable flexible reporting options to allow users to view their progress by product or non-product activities.

REQUIRED EDITIONS

Available in: Lightning Experience

Available in: **Enterprise** and **Unlimited** Editions with Life Sciences Cloud, Life Sciences Cloud for Customer Engagement Add-on license, and the Life Sciences Customer Engagement managed package.

USER PERMISSIONS NEEDED

To set up batch size for Activity Plans:	Life Sciences Commercial Admin permission set
--	---

1. From the App Launcher, find and select **Admin Console**.
2. Select **Activity Plan** and then select **Activity Plan Configuration**.
3. Under Batch Size Configuration, enter the batch size.
4. Under General Settings, set up how to calculate performance.
 - a. To calculate today's pace of calculation by working days, select **Enable working days calculations**. If you don't select this option, the pace is based on the time length of the activity plan.
 - b. To let users select product-based calculations on the activity plan chart, select **Use product-based calculations**.
 - c. To let users select non-product-based calculations on the activity plan chart, select **Use non-product-based calculations**.
5. Save your changes.

Set Up Activity Plans for Customer Engagement

As an activity plan administrator, use various objects in Life Sciences Cloud to create records and data for activity plans. Define time periods, plans, activity types, goals, and metrics.

REQUIRED EDITIONS

Available in: Lightning Experience

Available in: **Enterprise** and **Unlimited** Editions with Life Sciences Cloud, Life Sciences Cloud for Customer Engagement Add-on license, and the Life Sciences Customer Engagement managed package.

Use [Salesforce Data Import](#) to import all activity plan data in bulk from external sources to Salesforce. This capability provides an easy-to-use interface that lets you save time, enhance efficiency, and avoid any unintended manual errors. However, if you need to manually set up all records for activity plans, refer

these steps.

Create an Activity Plan

Establish a strategic activity plan to define activity goals for your sales representatives over a specific period. Tailor the plan's structure with flexible goal types, whether for individual accounts, weighted activities, or shared territories. Implement a formal review process with deadlines and thresholds to govern how sales representatives and managers can modify the plan. Give users the flexibility to adjust their goals as needed.

Associate Territories with Activity Plans

Connect your strategic activity plans to the territories where sales representatives perform the required activities. Define objectives for a specific territory, cascade performance goals down to the field level, and help provide clear direction to your sales teams. Create Activity Plan Territory records for associating activity plans with territories.

Set Goals for Activity Plans

Associate an activity plan with individual healthcare accounts and set their high-level performance goals. Define the required targets by breaking down the overall goal into product-specific and non-product-related activities. Establish a baseline to track and populate goal attainment as sales representatives complete their interactions and activities.

Set Goal Measures for Activity Plans

Refine your account-level goals by setting measurable targets for each distinct type of sales activity. Assign a value to each activity by choosing between a simple target count or a weighted model that values some interactions more than others. Build a complete performance framework that connects the high-level strategic plan to the specific, daily tasks your sales representatives perform.

Set Product Goal Measures for Activity Plans

Create a highly targeted activity plan that measures performance not just on the activity, but on the specific product being promoted. Link products to individual sales activities that you have defined for each account. Assign a unique weight to each product to strategically prioritize certain items within a weighted goal plan.

Create an Activity Plan

Establish a strategic activity plan to define activity goals for your sales representatives over a specific period. Tailor the plan's structure with flexible goal types, whether for individual accounts, weighted activities, or shared territories. Implement a formal review process with deadlines and thresholds to govern how sales representatives and managers can modify the plan. Give users the flexibility to adjust their goals as needed.

REQUIRED EDITIONS

Use [Salesforce Data Import](#) to import all activity plan data in bulk from external sources to Salesforce. However, if you need to manually set up records for activity plans, follow these steps.

Available in: Lightning Experience

Available in: **Enterprise** and **Unlimited** Editions with Life Sciences Cloud, Life Sciences Cloud for

Customer Engagement Add-on license, and the Life Sciences Customer Engagement managed package.

USER PERMISSIONS NEEDED

To create activity plans:

Life Sciences Commercial Admin permission set

Prerequisites:

- [Create a Provider Activity Measure Type record](#).
- Create a time period record with the start and end date of the activity plan

1. From the App Launcher, go to the Life Sciences Commercial app, and select **Activity Plans**.
2. Click **New**, and enter a name for the plan.
3. Select the status.

To let sales representatives review the plan before it's finalized, select *In Progress*.

4. Select the required time period for the activity plan.
5. For Usage Type, select **Provider Plan Cycle**.
6. Select an activity plan type.
 - To set a single goal for an account for all activity types, select **Account Goal**.
 - To set different weights for different activity types, select **Weighted Territory Goals**.
 - To set a single goal for an account that's shared across multiple territories, select **Account Goal Shared**.
7. Enter the number of working days for the activity plan.
8. To enable plan calculations for this activity plan, select **Calculation Enabled**.
9. Under the Review Details section, set up the review conditions.
 - a. For Assignee Due Date and Reviewer Due Date, enter the dates by when the sales representatives and managers must review the plan.
 - b. For Total Activity Change Review Threshold Percentage, enter the maximum percentage that a sales representative and manager can change the combined goals of all accounts.
 - c. For Total Account Change Review Threshold Percentage, enter the maximum percentage that a sales representative and manager can change the total number of accounts in the plan.
 - d. For Activity Change Review Threshold Percentage, enter the maximum percentage that a sales representative and manager can change an account's activity goal.
10. If you want to enable users to raise adjustment requests, under the Adjustment Details section, set up the limits within which an adjustment request must be raised.
 - a. For Assignee Plan Adjustment Start Date and Assignee Plan Adjustment End Date, select the date range within which the sales representative can raise an adjustment request.
 - b. For Reviewer Plan Adjustment Start Date and Reviewer Plan Adjustment End Date, select the date range within which the manager can review the adjustment request.
 - c. For Total Account Adjustment Threshold Percentage, enter the maximum percentage by which a goal measure can be adjusted.
11. Complete the remaining fields, as required.
12. Save your changes to activate the plan.

The Validate Activity Plans batch job activates the activity plan based on the associated time period.

Associate Territories with Activity Plans

Connect your strategic activity plans to the territories where sales representatives perform the required activities. Define objectives for a specific territory, cascade performance goals down to the field level, and help provide clear direction to your sales teams. Create Activity Plan Territory records for associating activity plans with territories.

REQUIRED EDITIONS

Use [Salesforce Data Import](#) to import all activity plan data in bulk from external sources to Salesforce. However, if you need to manually set up records for activity plans, refer these steps.

Available in: Lightning Experience

Available in: **Enterprise** and **Unlimited** Editions with Life Sciences Cloud, Life Sciences Cloud for Customer Engagement Add-on license, and the Life Sciences Customer Engagement managed package.

USER PERMISSIONS NEEDED

To create activity plan territory records:	Life Sciences Commercial Admin permission set
--	---

1. From the App Launcher, go to the Life Sciences Commercial app, and select **Activity Plan Territories**.
2. Click **New**.
3. Select the territory.
4. Select the activity plan that you want to use.
5. Save your changes.

Set Goals for Activity Plans

Associate an activity plan with individual healthcare accounts and set their high-level performance goals. Define the required targets by breaking down the overall goal into product-specific and non-product-

related activities. Establish a baseline to track and populate goal attainment as sales representatives complete their interactions and activities.

REQUIRED EDITIONS

Use [Salesforce Data Import](#) to import all activity plan data in bulk from external sources to Salesforce. However, if you need to manually set up records for activity plans, refer these steps.

Available in: Lightning Experience

Available in: **Enterprise** and **Unlimited** Editions with Life Sciences Cloud, Life Sciences Cloud for Customer Engagement Add-on license, and the Life Sciences Customer Engagement managed package.

USER PERMISSIONS NEEDED

To set goals:	Life Sciences Commercial Admin permission set
---------------	---

1. From the App Launcher, go to the Life Sciences Commercial app, and select **Provider Activity Goals**.
2. Click **New**.
3. Select the activity plan and the account of the healthcare professional.
4. For Overall Goal, enter the total target number of all activities associated with the account.
Leave the fields in the Overall Attainment section blank because they're automatically populated when the sales representative schedules, performs, or completes the activities.
5. Under Product Level Attainment, for Product Level Goal, enter the target number of activities that the sales representative must attain for products associated with the account.
Leave the fields in the Product Level Attainment section blank because they're automatically populated when the sales representative schedules, performs, or completes the activities.
6. Under Non Product Level Attainment, for Non Product Level Goal, enter the target number of non-product activities that the sales representative must attain.
Leave the fields in the Non Product Level Attainment section blank because they're automatically populated when the sales representative schedules, performs, or completes the activities.
7. Save your changes.

Repeat these steps for each account associated with the activity plan.

Available in: **Enterprise** and **Unlimited** Editions with Life Sciences Cloud, Life Sciences Cloud for Customer Engagement Add-on license, and the Life Sciences Customer Engagement managed package.

USER PERMISSIONS NEEDED

To set goal measures:	Life Sciences Commercial Admin permission set
-----------------------	---

1. From the App Launcher, go to the Life Sciences Commercial app, and select **Provider Activity Goal Measures**.
2. Click **New**.
3. Select the provider activity measure type that you created for the required activity type.
4. Select a provider activity goal that you created for the particular provider and activity plan.
5. Do one of the following.
 - To set a single, overall goal for the activity type, for Type, select **Goal**. Then, under the Overall Attainment section, for Overall Goal, enter the total goal value that the sales representative must achieve for the activity type.
 - To set weighted goals for the activity type, for Type, select **Weighted Goal**. Then, under the Overall Attainment section, for Overall Goal, enter the total goal value that the sales representative must achieve for the activity type. Next, under the Adjusted Values section, for Activity Weight Value, enter the goal value that the sales representative must achieve for each occurrence of the activity type.

Repeat these steps for each activity type tracked in the plan.

Set Product Goal Measures for Activity Plans

Create a highly targeted activity plan that measures performance not just on the activity, but on the specific product being promoted. Link products to individual sales activities that you have defined for each account. Assign a unique weight to each product to strategically prioritize certain items within a weighted goal plan.

REQUIRED EDITIONS

Use [Salesforce Data Import](#) to import all activity plan data in bulk from external sources to Salesforce. However, if you need to manually set up records for activity plans, refer these steps.

Available in: Lightning Experience

Available in: **Enterprise** and **Unlimited** Editions with Life Sciences Cloud, Life Sciences Cloud for Customer Engagement Add-on license, and the Life Sciences Customer Engagement managed package.

USER PERMISSIONS NEEDED

To set product goal measures:	Life Sciences Commercial Admin permission set
-------------------------------	---

1. From the App Launcher, go to the Life Sciences Commercial app, and select **Provider Activity Goal Measure Products**.
2. Click **New**.
3. Select a provider activity goal measure.
4. Select **Product** or **Life Sciences Marketable Product**, and then select the product that you want to associate with the activity type.
5. If the associated activity plan is of type Weighted Territory Goal, enter the product weightage.
6. Save your changes.

Repeat these steps for each activity type tracked in the activity plan. At a time, you can associate a maximum of ten products with an activity type.

Activity Plan Adjustments

Provide sales representatives and other users with the flexibility to modify their activity plan goals and goal measures as required. Users can track activity types for accounts that aren't in the plan or track additional activity types for accounts that are already in the plan. Also, users can update goal measures and remove accounts from a plan. Activity Plans can be adjusted both from the web and the iPad.

REQUIRED EDITIONS

Available in: Lightning Experience

Available in: **Enterprise** and **Unlimited** Editions with Life Sciences Cloud, Life Sciences Cloud for Customer Engagement Add-on license, and the Life Sciences Customer Engagement managed package.

package.

Note You can only make adjustments for activity plans that are active and are of type Account Goal. Also, you can only adjust activity goals for non-product based measures.

Users can create the following ad hoc requests:

- Add an activity type and set target goals for an account that's not in the activity plan, thereby adding the account to the plan. Or, track additional activity types for an account that's already in the activity plan. For the latter, users choose an activity type from the list of pre-existing activity types that are already part of the plan. In both scenarios when the reviewer approves the request, the system creates the corresponding provider activity goal measures.
- Removal of an account from an activity plan. When the reviewer approves the request, all the related provider activity goal measures are deleted.
- Modification of the assignee goals in an existing activity plan. When the reviewer approves the request, all the related provider activity goal measures are updated.

The Activity Plan Adjustment Request quick action appears in an Account record page's highlights panel. It also appears in the dropdown for each account that's listed in the following places.

- In the Aligned Accounts list on the Account tab
- in the Activity Plan filter on the Account tab
- In custom lists and filters on the Account tab
- On the Attainment Percentage tab of the Activity Plans component on the home page.

Adjustments must be within the threshold percentage defined for the activity plan. Adjustment requests adhere to date ranges for adjustment start and end dates for both the assignee and the reviewer.

Prepare for Activity Plan Adjustments

Help users request for activity plan adjustments by setting up the relevant records and picklist values for creating adjustments. Configure a quick action button to create activity plan adjustments requests.

Prepare for Activity Plan Adjustments

Help users request for activity plan adjustments by setting up the relevant records and picklist values for creating adjustments. Configure a quick action button to create activity plan adjustments requests.

Batch Jobs for Activity Plans

Batch jobs are automated processes designed to update and manage multiple activity plan records efficiently. Save time, reduce the risk of manual errors, and maintain the integrity and reliability of activity plan data with these jobs. Make sure that all relevant records are updated consistently and accurately by either triggering a job immediately or scheduling it for later.

REQUIRED EDITIONS

Available in: Lightning Experience

Available in: **Enterprise** and **Unlimited** Editions with Life Sciences Cloud, Life Sciences Cloud for Customer Engagement Add-on license, and the Life Sciences Customer Engagement managed package.

You can find the jobs in the Activity Plan Jobs and Working Days Jobs sections under Activity Plan in the Admin Console. For more information on how to run or schedule a job, see [Run Batch Jobs](#).

Job Name	Description
Validate Activity Plans	Activates and deactivates an activity plan based on its time period. • Marks the activity plan as Active if the start date of the activity plan is on or before the current date.

Job Name	Description
	• Marks the activity plan as Inactive if the end date of the activity plan is before the current date or if the start date is after the current date.
Update Activity Plan Status	Processes plans that have passed their due dates, manages the transition between Employee Review and Manager Review stages, cleans up redundant or invalid plan data, such as Provider Activity Goal Measure and Provider Activity Goal records, and updates the plan's status. The job runs if the activity plan status is Employee Review and the Assignee Due Date is before the current date or if the status is Manager Review and the Reviewer Due Date is before the current date.
Calculate Provider Activity Goal Measures	Calculates the scheduled and submitted counts for all provider activity goal measures associated with an active activity plan. Updates the Total Scheduled Activity Value and Total Actual Activity Value fields for Provider Activity Goal Measures and Provider Activity Goals. This job considers only active activity plans. Select a territory for running the job. To include inactive activity plans, go to the Inactive tab on the Job: Calculate Provider Activity Goal Measures window, select up to three inactive plans, and run the job.
Calculate Provider Activity Goal Measures for Shared Activity Plans	Calculates the scheduled and submitted counts for all provider activity goal measures associated with active shared activity plans. • Verifies all activities linked to the specified territories and activity plans, and retrieves the Provider Activity Goal Measure records. • Updates the Total Scheduled Activity Value and Total Actual Activity Value fields for Provider Activity Goal Measures. • Retrieves and updates the Provider Account Territory Information records that match the specified territory and account details.
Reset Provider Account Territory Information	Resets the provider account territory information associated with inactive provider activity goals. • Identifies inactive Provider Activity Goal records with activity plan

Job Name	Description
	type Account Goal, Account Goal Shared, or Weighted Territory Goals. - Filters Provider Account Territory Information records based on the linked account. - Updates the configured fields in the Provider Account Territory Information records to null.
Calculate Working Days	Calculates the number of working days for all active activity plans, excluding those with the Account Goal Shared type. - Gets configuration details, such as Time Off Territory Settings, Working Days Config, and BusinessHours. - Calculates the total possible working hours, and subtracts the hours for Time Off Territory (TOT) and holidays. - Accounts for weekends, holidays, and different types of time off, including full days, partial days, and scheduled time slots. - Updates the Working Day Count field for the Activity Plan records, rounding to the nearest 0.5 day.
